## Editorial AS WE SEE IT

All of us in this country are quite accustomed to hear half-truths, fuzzy generalizations, and wholly incredible claims issue from the mouths of candidates for political office. We have grown to feel that such speakers should be permitted a rather sweeping "poetic license." Few of us have, therefore, been particularly disturbed by the often somewhat absurd statements being made in the Presidential campaign now getting under way. It seems to us, however, that Senator Kennedy the other day stepped rather over the line of permissible foolishness, the more so since what he had to say was so artfully designed to influence the working men and women of this country—influence them by a means and in a direction neither of which can well be defended by any reasonable standard

We refer to the Labor Day address delivered by the candidate in the city of Detroit. The flexible standard of sensibleness and good faith allowed candidates extends, of course, to their use of statistics. In point of fact so many unwarranted conclusions are being constantly drawn from sets of figures themselves often seriously in question that ordinarily we should feel much inclined to pass over the imaginative inferences of candidates for political office, but when a gentleman who would have us place him in the highest office of the land has the effrontery or naivete (whichever it is) to tell us that "with an average rate of growth in this country every working man in the last eight years would have received \$7,000 more than he has received," the time has come to call a halt. It would in a sense be interesting to know how Senator Kennedy's statisticians came up with any specific figure of this sort—just as it would be interesting to know how so many mathematical neophytes of the past came to suppose that they had found a way to trisect an angle or to square a circle.

#### Statistical Nonsense

No one who has cut his eyeteeth would take the trouble to study the methods by (Continued on page 28)

# Achieving Real Economic Growth Without Losing Our Way of Life

By James F. Oates, Jr.,\* President, The Equitable Life Assurance Society of the U. S., New York City

In agreeing that economic growth will require more Federal spending, Mr. Oates specifies the kind of spending it should consist of and says it should be coupled with cuts in wasteful, non-essential programs. Growth is said to require tangible investments embodying new, modernized plant and equipment as well as intangible investments in education, research and development. He calls for a reorientation of Federal tax policy to encourage savings and investments.

Growth is a fact of life. It is, indeed, a requirement of life. Children are appraised in terms of physical and mental development. Mature men and women soon realize that the brain is a muscle

and must be exercised so that it may grow in perception and power. All of humanity has been enjoined by the Divine Being to grow in spiritual motivation, in comprehension of brotherly love (and oh — how much this is needed) and in the service of the Kingdom of God.

We know in the busy streets

of daily life that all living organisms must either grow or slowly perish. This is particularly true of the secular institutions conceived and built by man, such as the State, and the business corporation. In

this shrinking world of instant communication and easy access, people are multiplying rapidly and they know more about how to live and how to kill than ever before. In this setting the monolith Russia has raised on high the ugly and age-old challenge of materialism, the flaming faith in the dictatorship of the proletariat and the passionate

declaration of war (cold and hot) against the dignity and sanctity of the individual man.

If we are to succeed in meeting this challenge, we must, of course, be strong; strong in faith, courage and determination, as well as in the full range of military and economic power.

I invite attention to an indispensable ingredient of power; namely growth—economic growth—and as to what measures should be taken by our nation to assure the continuation of such growth.

Some of the proposals offered for accelerating our growth rate demand with vigor and considerable persuasiveness an enlarged role for the Federal Government. Many who oppose this view think that such expansion would lead to an obnoxious increase in the Federal Government's direction and control over our way of life and thus threaten the sanctity of individual freedom. The attendant controversy has divided our people, has stirred them to heated political debate, and has called for a basic re-examination of our deepest convictions and attitudes with respect to the role of government in a free enterprise system.

The controversy over how to achieve a faster growth rate is timely, real and important. It is one which we should all take seriously — for the solution we choose may well be one of the most critical decisions we shall ever be called upon to make in our lifetime. But in seeking a solution, let us remember that growth is a means to an end and not the end itself. Economic opportunity for all, the dignity and rights of a free man, the enlargement and ennoblement of an individual's life purpose—these are the real goals to be sought by society. These are, therefore, the true objectives of economic growth. We can not destroy such objectives in the name of achieving economic growth.

As we review the record of these recent decades there is a noticeable drift (Continued on page 28)

# Outlook for Rebuilding Savings via Life Insurance

By Dr. James J. O'Leary\*, Director of Economic Research, Life Insurance Association of America, New York City.

In directing the life insurance industry's attention to the "great opportunity" now present to reverse the slowing down in the flow of life insurance savings, Dr. O'Leary explains why "there is no reason today for . . . [being] backward about selling permanent cash value contracts." The insurance industry's economist probes the reasons for decline in savings through life insurance medium; discusses the implications of this for economic growth; and deplores attempt to force faster economic growth through expanded Government spending and easy money.

(1) During the past 60 years the American economy has enjoyed an unparalleled expansion; (2) This has also been a period of spectacular growth of the life insurance business, as measured by the accumulation of saving through life

James J. O'Leary

insurance; (3) The productive investment compounded. of life insurance savings has contributed enormously and in many our national economy is not growways to the economic growth of ing fast enough, the record of our the country; (4) In the past sev- growth during the past half ceneral years, however, the pace of tury has been unparalleled in any saving through life insurance has slowed noticeably, for various remarkable achievement. How reasons that will be discussed; can we explain the capacity of the (5) This slowing down in the flow of saving through life insurance vigorously when growth has been has grave implications at a time so slow in most other countries? in which the United States sorely There are, of course, many reaneeds an accelerated rate of economic growth financed soundly the abundant natural resources we out of a rising rate of saving by the American people; (6) To play its part in faster-growing national with a highly stable system of economy, our business now has Federal, State, and local governthe responsibility to redouble its ment which has provided a favorefforts to sell life insurance as a able environment for economic means of saving by the American growth. Our economic system has people. It also has been the re-encouraged individual initiative sponsibility to play a more effective role in combatting inflationary policies.

#### The Economic Growth of the **United States**

In beginning our consideration of the role of life insurance in an expanding economy, it will be useful first to review briefly the economic growth of the country in the past several decades. For lack of a better measuring rod, the economist employes the annual estimates which have been developed of the gross national during a given year.

Fifty years ago, in 1909, the GNP of the U.S., measured in terms of the value of the dollar States has, therefore, been our in 1959, amounted to about \$117 capacity to develop means of savbillion. By last year, GNP had ing by the people which have prorisen to \$480 billion. In other

It will perhaps be helpful to have words, during this half century a brief review, at the beginning, the total value of goods and servof the points I shall endeavor to ices produced annually in our bring about. These are, as follows: national economy, as measured in terms of a dollar corrected for changes in the general price level, rose over 400%. On the average during this period the annual rate of increase in our national output (again in constant dollars) was about 3% compounded annually. Because of the increase in our population during the past 50 years the rise of GNP on a per capita basis was considerably slower. Again in terms of the 1959 value of the dollar, GNP per capita rose from about \$1,295 in 1909 to \$2,700 in 1959. In other words, GNP per capita just about doubled during this period, with the annual rate at about 1.5%

Despite current concern that American economy to grow so sons, most the most obvious being possess. High on the list is the fact that we have been blessed encouraged individual initiative and the desire to get ahead. It has encouraged inventiveness and innovation, risk-taking, and the spirit of competition, which are the driving forces of economic growth.

Perhaps most important, the American economy has grown rapidly because the American people have been willing and able to save a substantial part of their income each year and make it available for the production of capital goods. The heart of the process of economic growth in product of the United States. The our economy has been the availability of savings to finance the simply means the dollar value of pacity. Economists who have all the goods and services pro- studied the growth of this country duced in the national economy are agreed that the basic factor estricting growth has been the limited supply of saving.

> A highly important key to the Continued on page 26

## The Gillette Company

By Dr. Ira U. Cobleigh, Enterprise Economist

Viewing the stock of a company famous for its mass production, extensive advertising, world-wide merchandising, repeat sales, and high returns on invested capital.

Except for an occasional Castro home permanents, and the effecor Hemingway and the current tiveness of Gillette manufacturing spate of beatniks, bearded laddies and sales techniques the Toni inare almost as rare in our affluent vestment was all paid off within society as bearded ladies. Importantly responsible for this smoothand "Prom" home permanents shaven appearance of mankind, is have prospered except during a the Gillette Company which, in style changing lull in 1957 and 1959, produced over 2½ billion 1958. Since the addition of "No 1959, produced over 21/2 billion blades for American shaves, and Mix" Toni Home Permanent, and sold more than 3 billion blades in a broadened line of hair sprays 119 foreign countries, including (Adorn) facial cleansers, deodorall the "Free World" and several ants and shampoos, the Toni Divi-curtained countries as well. That's sion has gone forward and it a lot of blades and Gillette is racked up its second best year in quite a company. It sells two- 1959. thirds of all the razor blades bought in the United States and Canada and has increased (by about three-quarters of 1% annually) its share of the domestic market since the end of World War II. Three product trade names are used, Gillette, Valet and Tech.

Actually Gillette has three main product lines: (1) shaving products including razors, blades and shaving creams which deliver about 65% of sales; (2) cosmetics analysts, made money with Paper and hair preparation products for women (the Toni Division), which account for around 26% of sales gins. and (3) Paper Mate ball point pens accounting for the remain-

#### Shaving Products

The Gillette Safety Razor Division had a record year in 1959. Sales of its razors, including the new, widely - advertised, adjustable one, blades and Foamy Shaving Cream all expanded to new highs and the outlook is still brighter for this year. After about years of intensive research Gillette introduced this past January an amazing new blade called the Super Blue Blade. While this brings a premium price (10 for 69c instead of 10 for 49c) it has stocked by 99% of all American drug stores. It affords a smoother, closer shave than any of its predecessors, and is most attractive from the Company standpoint in that it costs but little more to produce than the standard blade although it commands a premium retail price. The expanded sales, and higher profit margins created by the Super Blue Blade are expected to propel Gillette earnings to a new peak for this year. And that possibility should continue to interest present and potential shareholders.

#### Toni Division

The Toni Company was purchased in 1948 for \$20 million. Due to the rising popularity of Gillette common for any length of

Paper Mate was acquired in the Fall of 1955 and some investment analysts questioned, at the time, the profitability of this merger since the ball point pen business is notoriously a highly competitive one. Paper Mate is the largest American producer of ball point pens and this division fits well with Gillette's known preference for products with a timeless refill demand. Gillette has, despite the aforementioned Mate each year, and is busily at work improving its profit mar-

Like most modern successful companies, Gillette is researchminded. The company has five research laboratories, spent \$4 milwill increase the outlay for 1960. Research not only includes refinement of existing products and ideating new ones but is also devoted to improving manufacturing and engineering techniques all along the line.

The advertising genius of Gil-Gillette's face would be instantly proved a terrific seller and is recognized by tens of millions of men throughout the world. together Gillette spent about 17% advertising in 1959; and there is growth factor, nobody can deny. no doubt that we will be asked to "look sharp" even more frequently in 1960.

> Another facet of Gillette's operations that offers a vista of expansion for the future is the Gillette Laboratories division, founded in 1957 to manufacture and market proprietary drugs. Under an arrangement with the Upjohn Company this division now markets Thorexin cough remedy and cold capsules. Addition of new drug products, over time, would seem highly probable.

We Are Pleased to Announce That

time have come to feel that this equity is not only a consistently fine earner and a reliable dividend payer, but displays a number of growth characteristics as well. This is due to the constantly broadening product list, rising standards of living which emphasizes good grooming, and the high conversion rate of sales into profits. Gillette earns 30% in net before taxes.

#### Financial Strength

Financially, Gillette has been a magnificent performer. It has no funded debt and has paid dividends on its common since its first year in business, 1906. In good times or bad, men want to look presentable and they do not propose to lose an order, a job or a social advantage "by a whisker."

At the 1959 year-end the company had over \$51 million in net working capital which is plenty of money for operations and a sizable war chest available for merger purposes as well. Any high profit quality product that can be sold in a drug store is legitimate merger bate for Gillette.

#### Dividends

We mentioned the long dividend record. It's not only a long but a generous one. The average payout has been 70% of net over the past 15 years and there were six dividend increases in the 1950 decade. Present rate is \$2.50. In addition there was a 2-for-1 stock split in 1950 and again in 1955, and board room gossip has hinted at another split within the next 10 months, a rumor that management has denied.

Sophisticated stock buyers who lion in this area last year, and have taken a good look at GS seem to like the view. Shareholders have increased in number from 25,000 to 40,000 in the past tual funds are reported to have added Gillette to portfolio this autumn proportions remains

## The State of TRADE and INDUSTRY

Steel Production Electric Output Carloadings Retail Trade Food Price Index Auto Production Business Failures Commodity Price Index

cial conditions that:

Late-summer business reports, while they show over-all activity at high levels, continue to carry a element of uncertainty which has arisen as to the economic outlook for the rest of the year.

So far the "cleanup" of 1960appointing. Sales of new cars during the first two-thirds of August ran below the pace a year earlier, continuing the weak pattern which emerged in July. As a result, dealers' stocks of unsold cars remain uncomfortably large and could be an obstacle to sustained high-level production of the new models to be introduced this fall.

Output prospects are also uncertain in the case of steel. The increase in orders that had been widely expected to appear by late summer has not materialized. Instead, it appears that steel users have continued to draw on previously accumulated stocks to meet part of their needs. Steel makers doubt that this practice can continue much longer, since the inventory level at the end of August was believed to be close to the recession low of 1958. As a consequence, they are inclined to regard some improvement in orders this fall as a virtual certainty. Whether and this sugggests that the retardseven years and three major mu- it will prove sufficient to warrant a rise in steel output of normal

#### Order Backlogs Still Declining

Order experience has been disappointing not only in steel but for manufacturers in general. In liquidation cease—still a definite July-for the eighth consecutive possibility - the general business month-new orders received by manufacturers ran below sales. Thus backlogs continued to recede and at the end of July were the lowest since late 1958. The persistence of this trend is one of the most worrisome features of the business situation.

Seasonally adjusted, manufacturers' new orders in July totaled \$29.4 billion, down \$700 million from June. Whereas the declining tendency of orders in previous months was pretty much confined to durable-goods industries, weakness in July spread to the nonindustrial production at a nearpossible mainly beca production in durables as a whole has been offset by rising output of soft goods.

In its September Survey, the Mor- During the first half of the year, gan Guaranty Trust Co. of this the adjustment for most businesses city reports on business and finan- did not involve actual net liquidation of stocks but rather a slowing down in the rate of accumulation. Whereas total business inventories increased at an annual rate of \$11 tone of hesitancy, extending the billion in the first quarter, the element of uncertainty which has rate of accumulation fell to \$5 billion in the second quarter.

The summer period appears to have witnessed, for the first time, model automobiles has been dis- actual net liquidation of stocks on a moderate scale by business in general. July data show this to be the case, and there are indications that liquidation may have con-tinued into August. Bank loans, for example, showed a declining trend. From the beginning of July through the third week of August, business loans of weekly reporting member banks decreased by about \$1,150 million. This was in contrast to experience in the comparable period of 1959, when such loans rose by \$700 million. In the final week of August, a sharp rise occurred in business loans in New York City, but it is impossible as yet to assess the significance of this break in trend.

With inventory-to-sales ratios considered generally satisfactory by postwar standards, there was good reason until recently to believe that inventory adjustment by business might stop short of actual liquidation. Apparently it hasn't, ing influence of the adjustment on gross national product may persist longer than had been previously anticipated. It will be important to watch inventory statistics closely for the next several months to see whether the reduction in stocks continues. Should outlook would improve. Conversely, signs that liquidation was becoming more pronounced would have distinctly unfavorable implications.

The various indications of lack of buoyancy in the economy suggest that GNP probably will not show a significant rise for the third quarter. Indeed, in the light of apparent inventory tendencies, there is a possibility of a slight decline for the period. Consumer spending for goods and services as a whole and capital spending by business have been high, but durable goods sector as well. Con- neither has shown any marked tinuation of this movement would expansion. Governmental outlays disturb one of the props which will almost certainly be higher for have been sustaining the index of the quarter and exports may well record level. The relatively good show another gain, but increases showing of total industrial pro- in these areas probably won't duction so far this year has been fully counterbalance the inventory weakness. Housing expenditures in the third quarter may prove a disappointment. There were indications in the second quarter that building activity was stabilizing after its extended decline, but in

#### Bank Clearings for Sept. 10th Week Up 10.7% Above Corresponding Week Last Year

Bank clearings this week will show an increase compared with a year ago. Preliminary figures compiled by the Chronicle, based upon telegraphic advices from the chief cities of the country, indicate that for the week ended Saturday, Sept. 10, clearings for all cities of the United States for which it is possible to obtain weekly clearings will be 10.7% above those of the corresponding week last year. Our preliminary totals stand at \$21,569,773,705 against \$19,477,-679,677 for the same week in 1959. Our comparative summary for the leading money centers for the Sept. 10th week follows:

		-(000s	omitted)	
		1960	1959	%

#### Automotive Buying of Sheet Steel Hits Uptrend

Automotive industry buying of sheet steel for October shipment is at the highest volume for many months, Steel magazine said.

Some automotive tonnage originally scheduled for late August delivery is going out from the mills. That means September will experience a noticeable pickup in deliveries. Generally, developments in autos will point the way for steel the rest of this year.

The metalworking weekly said finished steel demand is increasing slowly, with steelmen booking small orders more actively. One Midwestern mill reports daily order receipts gained for four consecutive weeks: the latest week's tonnage was the best since February. Another mill's orders are the best since April.

Consumer stocks still act as a damper on new steel buying. Consumption is running ahead of incoming shipments, so it's believed that buying, at least for prompt shipments, can't be put off much longer. Until delivery promises tighten, however, there's little likelihood of much stock rebuild-

September order placement is expected to top August's by at that September steelmaking operations will exceed the August level.

Last week, national ingot production was estimated at 1,441,000 as significant in the low state of formula which might prove to be net tons. The ingot rate averaged steel operations: 50.6% compared with 52% the preceding week. Part of the drop ditional big steel users are not was due to curtailments over Labor Day.

Quick recovery of national operations may be stymied by the rail strikes. Some steel shippers which, with poor profit showings, and consumers have been incon- are not replacing and repairing venienced by the Pennsylvania rolling stock more than the ab-Railroad strike. ## ther drop in nonfarm housing movement of scrap for export has starts clouded the picture. movement of scrap for export has been slightly hampered. What It Would Cost Britain pending a revival in mill buying. Steel's price composite on No. 1 To Join The Common Market

By Paul Einzig

Should the British jettison the Commonwealth for the sake of being admitted to the European Common Market? Answering the influential argument of the declining importance of "preference" trade with the Commonwealth, Dr. Einzig characterizes the data used in support of the argument misleading. He asks what would happen to the British cost of living and to the growth of newly-created African countries, who must export in order to stand up to USSR inroads, if the Commonwealth were excluded from, and Britain joined, the ECM.

ing the European Common Mar-

It now seems that the Common Market's attitude towards British trade with the Commonwealth There is a slight seasonal upturn constitutes the only really grave tural interests to being sacrificed for the sake of European agricultural integration was also considered a more or less equally important obstacle. It now seems, however, that West German resistance to agricultural integration is strong enough to remove the likelihood of adopting a system that would be entirely unacceptable to British agriculture. The strengthening of American resistance to European agricultural integration also reinforces British opposition to it. It is therefore possible to visualize an

#### A Suggested Compromise

The position is totally different, however, as far as trading with tory correction ended. The fact the Commonwealth is concerned. The idea of admitting Commonwealth products into the Common This means that a major, long- Market is of course, entirely un-The small farms in France would be entirely unable to face the competition of Canadian or Australian land products. The only acceptable would be to exclude Commonwealth and allow Britain a free hand to continue the existing preferential system as far as agriculture is concerned. The main objection to this on the titude of the British Press to an Shearson, Hammill & Co., 520 part of the Common Market is that once these products are in Britain they could find their way under the guise of British prod- have to be on terms that safe- & Co. Incorporated. ucts into the Common Market.

That problem has its answer in Continued on page 30 There was no difficulty whatsoever in elaborating an acceptable formula at the Stockholm negotiations which lead to the formation of the European Free Trade Association. There is no reason why the countries of the Common Market should be more distrustful about the possibility of abusing the system of certificates of origin. In any case as far as land products are concerned Britain could well undertake to renounce exporting such products to the Common Market under preferential arrangements, for the simple reason that in any case the volume of British land products imported by the Common Market is negligible. It will take some time, however, before this obvious solution would become acceptable to France, and possibly other Common Market countries.

> Growing Public Opinion for ECM Meanwhile pressure in Britain to induce the Government to sign

major blow to the Commonwealth

Whenever conclusions based on statistics are in flagrant conflict with those based on common sense J. W. Sparks & Co., 120 Broadit is on the whole advisable to doubt pending further investigation. The weighted average value of preferences to total Commonwealth exports conceals wide discrepancies as to the extent to which particular Commonwealth countries and particular commodities are liable to be affected. It is all very well to say that the average is merely between 4 and 5%. The fact that it is so low would be of small comfort to some industries in Commonwealth countries, which can barely hold their own on the British market against Western European competitors even under existing arrangements. The elimination of preference would spell ruin to such industries. What is even more important, under the in- BALTIMORE, Md.-Robert Gar-Market. Britain would impose from the Commonwealth, which

guards the vital interests of Commonwealth countries.

#### What Would Happen in Africa?

From a purely British point of view too, the imposition of duties on food and raw materials which are at present admitted free of duty and the increase of duties on those which are admitted at present at very low duties would present grave disadvantages. It would increase the cost of living and the cost of production and would more than offset the effect in an opposite sense resulting from a reduction or elimination of duties in relation to imports from Western Europe.

Last, but by no means least, the penalizing of exports of the newly-created African countries would open the way to Communist political and economic influence in said countries.

## A Good Performance on the Thruways

The New York State Thruway Authority offered \$50,000,000 State guaranteed serial (1985 - 1995) bonds on Thursday, Sept. 8. Judg-ing by the recent action of the bond market, one might have expected at least two bids for this teed obligations. After thorough consultations, a joint single bid was proffered by the two traditional bidding groups.

The State Comptroller very wisely accepted the bid, even though it represented the pricing of this long term issue for retail at levels considerably lower than similar representations in the secondary market. Despite this purportedly bargain pricing, the offering was not a sell-out as many thought it would be. On initial offering about \$32,000,000 was taken down from the account and, at this writing, close to \$16,000,000 remains as a balance.

All factors being considered we been the case before. Secondly, ance being about \$3,400,000. the managers exercised leadership in their judgment of a market that had been projected upward on flimsy premises within a brief

#### **Payment and Registration**

Principal and semi-annual interest (April 1 and October 1) payable, at the option of the holder, at the office of the Treasurer of the City and County of San Francisco, California, or at the fiscal agency of the City and County in New York, N. Y. Coupon bonds in denomination of \$1,000 registrable only as to both principal and interest.

#### Tay Evemption

In the opinion of counsel, interest payable by the City and County upon its bonds is exempt from all present Federal and State of California personal income taxes under existing statutes, regulations and court decisions.

#### Legality for Investment

We believe that these bonds are legal investments in New York for savings banks and trust funds, in Connecticut for savings banks, and in California for savings banks, subject to the legal limitations upon the amount of a bank's investment, and are likewise legal investments in California for trust funds and for other funds which may be invested in bonds which are legal investments for savings banks and are eligible as security for deposits of public moneys in California.

#### **Purpose and Security**

These bonds, issued under provisions of the Charter of the City and County of San Francisco and the laws of the State of California for various purposes, in the opinion of counsel constitute valid and legally binding obligations of the City and County of San Francisco and the Board of Supervisors thereof has power and is obligated to levy ad valorem taxes for the payment of said bonds and the interest thereon upon all property within said City and County of San Francisco subject to taxation by said City and County (except certain intangible personal property, which is taxable at limited rates) without limitation of rate or amount.

#### Tax Gain, Amortization of Premium

These bonds will be initially issued by the above named political subdivision at not less than their par value, and a taxable gain may accrue on bonds purchased at a discount, Investors are required under existing regulations to amortize any premium paid thereon.

#### Legal Opinion

The above bonds are offered when, as and if issued and received by the underwriters listed below, as well as other underwriters not shown whose names will be furnished on request, and subject to approval of legality by Messrs. Orrick, Dahlquist, Herrington & Sutcliffe, Attorneys, San Francisco. California, a copy of whose legal opinion will be

## Puerto Rico's Tax Exemption Program and U.S. Investor

By R. Palmer Baker, Jr., Partner, Lord, Day & Lord, New York City

Analytical legal appraisal is made of the "enormously attractive" investment situations available for American business in Puerto Rico. Mr. Baker briefly outlines the advantages which the Commonwealth tax exemption program holds for mainland investors and then describes the United States income tax arrangements which can be made to obtain these advantages. This paper illustrates the points made by going over the various investment vehicles available and by distinguishing the benefits of the various programs from each other. Rather than wishing to over-emphasize the attraction of a tax-free liquidation before the end of the exemption period, Mr. Baker makes the reminder that in most cases the investor may prefer to continue the business beyond the exemption date because of regular inducements under usual tax laws.

vantages to mainland investors domestic or foreign. lies in the fact that the United ment from the mainland.

1954 is an extension and modifi-cation of the successful tax ex-exemption period only the postemption program initiated in 1947. Several types of exemption are now available for eligible new businesses which make application before Dec. 31, 1963. Eligibility extends to the manufacture of the wide range of goods not produced in Puerto Rico on Jan. 2, 1947, and also to the production of a con-siderable list of designated additional articles, from artifical flowers to paperboard and paper pulp. The income earned from such businesses, and from property made available for the use of these businesses, is exempt from tax for a period of 10 years. In addition-and manufacturers with experience in overseas operations will be particularly appreciative of the following—there is an ex-emption from insular and municipal property taxes for a period of from 5 to 10 years, and from municipal fees and excises for 10 years. Tourist hotels are also entitled to these exemptions, and commercial hotels receive a 50% exemption.

Worthwhile Repeating It is worthwhile calling this enormously attractive program to the attention of American business again. The exemption is granted by the Governor, who administers the program through the Industrial Tax Exemption Office. Once granted, the exemption has the protected status of a contract between the exempt business and the Commonwealth. In the absence of fraud, it can be revoked only because of failure to comply with the Act or because of arbitrary interruption of production by the exempt business for more than 30 days. In order to prevent abuses from trading or speculating in the exemption, certain transfers of property or interests in the exempt business require the approval of the Governor during the exemption period. However, partnership and stock interests may be freely sold if a change of control does not result, and otherwise may be salable with the Governor's approval. There is no inhibition on transfers by operation of law or death or as a pledge to secure debts. Finally, and of obvious importance, no approval is required to liquidate an exempt corporation which is an 80% or more owned

The important ing corporations) will not apply point here, however, is that the if the exempt business, conducted way was constitutionally open to in corporate form, is liquidated the Commonwealth to offer a before the end of the 10-year exdramatic tax incentive to invest- emption period. Similarly, sales of the stock during that period The Industrial Incentive Act of will not be taxed in Puerto Rico,

1 To be reduced to 15% under recent legislation, effective July 31, 1961, if the payer is engaged in manufacturing in Puerto Rico.

exemption appreciation in value over cost will be taxed. Finally, there is an inducement to retaining ownership and keeping the corporation alive in that the earnings of the first seven exempt years can be paid out as dividends free of withholding tax at any time within 15 years from the start of the exempt operations if the recipient either resides in Puerto Rico or does not have to pay tax to another jurisdiction. The latter qualification makes sense, because a United States citizen and resident, for example, can credit the Puerto Rican withholding tax against his United States tax liability.

How is the United States investor to take advantage of this pattern? Let us take the situation of the corporate investor first.

#### Advantages to the Corporate Investor

The Puerto Rican branch profits of an ordinary United States corporation would be fully subject to tax in the United States. separate subsidiary corporation is therefore required to carry on the exempt Puerto Rican business, and obviously this must be a corporation with special status under the United States tax laws. In fact there are three choicesa Western Hemisphere Trade Corporation; a domestic United States corporation which qualifies for the benefits of Section 931 of the Internal Revenue Code; and a Puerto Rican corporation.

The Western Hemisphere Trade Corporation is a familiar vehicle, but it is not very satisfactory for Puerto Rican operations. The Code defines it as a domestic corporation which meets each of these three tests:

sources outside the United emption period) Puerto Rican tax. States.

(2) 90% or more of its income must be derived from the active conduct of a trade or

(3) All of its business, other than incidental purchases, must be done in continental North, South and Central America, or in the Wes

Such a corporation receives a special deduction which results in maximum United States tax burben of 38%, or 14 points lower than the usual tax rate. Even this lesser burden, however, reduces the attraction of the Puerto Rican exemption. Moreover, dividend distributions to the parent out of the Puerto Rican earnings are subject to the approximate 30% Puerto Rican withholding Tax.1 The bulk of this tax cannot be absorbed by way of credit against the United States tax which has to be paid at the maximum intercorporate rate of 7.8% on the dividend. Hence the overall Puerto Rican and United States tax burden come to about 57%.

#### Considered a Foreign Corporation

The answer for the investor in this case stems from the fact that the United States does not tax the earnings of a foreign corporation unless these earnings are derived from sources within the United States. A Puerto Rican corporation is considered to be a foreign corporation. And, under section 931 of the Code, a domestic corporation may be treated like a foreign corporation if it earns enough of its income in Puerto Rico. Through the use of one of these vehicles, the Puerto Rican income may thus be kept within (1) 95% or more of its gross the corporation free of both income must be derived from United States and (during the ex-

In each case, dividend distribu-tions to the United States parent bear the full rate of corporate tax, since the 85% deduction, available on dividends from most domestic corporations, with the resulting maximum rate of 7.8%, does not apply. However, in this circumstance, the Puerto Rican withholding tax does not impose an additional burden, since it is wholly absorbed as a foreign tax

A domestic corporation qualifying under section 931 has one material advantage over the Puerto Rican corporate form. Because it is a domestic corporation, it may be liquidated tax-free into its United States parent if the parent owns at least 80% of its stock (other than non voting stock limited and preferred as to dividends). Theoretically, therefore, all of the Puerto Rican profits of such a corporation can, if accumulated, be brought home to the United States free of any tax. By way of contrast, a Puerto Rican corporation, like other foreign corporations, cannot be liquidated tax-free without the prior ap-proval of the Commissioner of Internal Revenue under section 367 of the Code. This approval has been granted in some recent situations, but it is not easy to convince the Commissioner, as the statute requires, that a principal reason for the Puerto Rican arrangement is the avoidance of Federal income taxes. Accordingly, the liquidation of a Puerto Rican corporation will normally entail a 25% capital gains tax.

The difficulty with a domestic corporation under section 931 is that all of the benefits of the section may be lost if there is not meticulous adherence to its statu-

## Moderate Business Recession Ahead

By William F. Butler,\* Vice-President and Economist, Chase Manhattan Bank, New York.

Leading bank economist, while asserting that 1980 will be recorded as a good year, foresees a subsequent serious downturn to follow in early 1961. Excepting for a major step-up in defense spanding, he believes no Government anti-recession action could be invoked promptly enough to be effective. Dr. Butler notes profits squeeze resulting from rising unit labor costs. Foresees cutback in auto sales furthered by self-imposed consumer credit restraint. Citing slow-down in economy's over-all growth rate, advocates remedy via reduction of tax burden on saving and investment, and holding wage rate rises within economy's ability to pay them. Warns against massive Government spending as anti-recession method.

The present prospect is that busi- generally comparable in intensity after Labor Day. Steel operations vious recessions. In some signifi-

will run at a high rate as inventories of 1961 models are amassed. Business still plans to carry capital expenditure programs for 1960, which means a sustained high level of expenditures in this key area. 1960

William F. Butler

will go down on the books as a good year for general business, though not a boom year. In some respects it will prove a disappointing year in that sales in many lines will fall short of earlier expectations. Yet it will be a year of record highs in production and employment without inflation-and that's a considerable accomplishment.

At the same time, it now seems clear that the economy is approaching a downturn into the recession phase of the business cycle. While the precise timing of the turning point can be affected by decisions yet to be made by business and government, the downturn will probably come in However, it could come late this year if a move to cut capital expenditures and pare inventories in anticipation of a recession should gain sufficient momentum.

#### Sees Similarity to Previous Recessions

The present prospect is that the

should pick up moderately and duration with the three preshould move higher. Auto output cant respects, the economy is better situated to resist downward

pressures than was the case in 1957. However, it should be remembered that the postwar business cycle pattern has involved a decline in industrial production of 10-15% in the year immediately after the downward turning point, followed by three years of recovery and good business.

These prospects could be changed if international developments should call for a significant step-up in the defense effort. Short of that, it is unlikely that the new Administration could take action rapidly enough to have much effect on the course of the recession phase of the cycle. However, actions taken to spur recovery in 1961 could have profound implications for the future growth and prosperity of the na-

There are a number of cogent reasons for expecting 1961 to be a recession year. Of these the most significant is the prospect of a decline in business investment in new plant and equip-

Plant and equipment expenditures in current dollars have not in investment reflects the lag in profits - corporate profits after taxes in the first quarter of this year were only 5% above the preplained by two developments:

Wages have continued to increase more rapidly than output per man-hour, raising unit labor costs about 2% per annum.

since 1957 is one-half of 1%.

#### The Profits Squeeze

Thus, profits have been squeezed by rising unit labor costs. A decline in the rate of profit invariably leads to a cutback in expenditures for new plant and equipment. Business must reduce the rate of growth of capital assets in an attempt to maximize the rate of return. This means that only those investment projects which offer a good return can go ahead.

The magnitude of the decline in plant and equipment expenditures is difficult to toresee at this juncture. Most companies are in the process of preparing capital budgets for 1961. However, a statistical analysis would point to the possibility of a 15-20% drop from the end of 1960 to the end of 1961, or somewhat less than that in the 1957-58 recession.

#### Auto Slow-Down

At the same time, auto sales will probably be lower next year. Instalment credit has risen rapidly in the past 18 months and has reached the point where the current rate of repayment takes 13% of consumer income after taxes. Experience in recent years suggests that individuals are reluctant to incur further debt once this point has been reached. Next year may see repayments on past credits rise above new credit extensions, as was the case in 1958. This could mean a cutback in auto sales from 6.0 million this year

Surveys of consumer attitudes year. in the past month or two show an Consumer purchases of non- (2) The major reason for th increasing reluctance to buy du- durable goods and services tend to slow-down appears to be about the future stability of their of a recession and to increase beprices, and more inclined to defer turns up. The built-in stabilizers and other such products.

#### Inventory Adjustment

Any decline in business sales could touch off a period of in- pave the way for an upturn. ventory liquidation. Inventories These expenditures could rise by are not top-heavy as measured by regained their 1957 peak. This lag past standards, and steel inventories are on the low side. Nonetheless, business is trying economize on inventories so that any general drop in sales could vious peak in the first quarter of lead to a severe cutback in orders 1957. The lag in profits is ex- in an attempt to squeeze down the level of inventories.

The shift in inventory buying cut demand by \$91/2 billion a year in the first six months of the 1957-58 recession and accounted Prices of industrial products for more than half of the decline 1961 recession should prove to be have held stable for more than a in GNP. While there is no way to

year, and the average annual rise forecast the possible swing in inbe comparably large.

#### Warning Signals

The National Bureau's leading indicators tend to confirm the view that the economy is heading into a recession. The indicators have not yet given an unequivocal signal of an impending downturn. But they have displayed increasing weakness, and now present a picture similar to that 6-9 months before past recessions.

#### Elements of Strength

While the downward forces at work appear to be powerful enough to bring on a recession, there are also significant elements of strength in the picture. They promise to provide substantial support in the period ahead. In fact, prospects in a number of areas are more favorable than they were in 1957-58. Thus, there is good reason to hope that the 1961 recession will be no more severe than the previous three postwar recessions.

Housing starts could rise from their recent annual rate of 1.3 million to 1.5 million (the rate reached in nearly 1959). While reports are that sales have been sticky in many areas of the nation, the greater availability of mortgage credit plus efforts by builders to meet the price and quality requirements of customers could support such an upturn. Housing expenditures could to something like 5 million in 1961. rise by \$2 billion in the next

rable goods. People are concerned be maintained in the early stages incomes, worried about higher fore general business activity purchases of autos, refrigerators operate to maintain personal income after taxes in the early stages of a recession. By so doing, support expenditures for non-durables and services and a \$10 billion rate in the year less than the increase that took place in the first year following the 1957 downturn).

Government expenditures could, on the basis of present budget prospects, rise by some \$5 billion in the year ahead. Federal expenditures could go up \$2 billion or more — in the declining phase of the 1957-58 recession they showed little increase.

Exports might hold up fairly well, while imports might decline moderately. While the nation's hence reduce our ability to meet balance of payments position the challenging problems which would remain precarious, it might we confront. not worsen much in 1961 (in contrast, the swing to deficit was almost \$4 billion in 1958).

#### **Moderate Recession**

This adds up to the prospects of First Jackson a moderate recession. Here is how the arithmetic works out:

eral dimensions appear in prospect between mid-1960 and mid-1961 (figures in annual rates):

Shillions change mid-'60 mid-'61 Shill'n. perct. Plant & eqp. 37.0 32.2 — 4.8 —13% Total \_\_\_\$86.8 \$65.9 -\$20.9 -24% Expenditures could increase in other areas:

Total \_\_\_\$404.3 \$422.8 \$18.5

On balance, GNP at annual rates would decline less than 2% from peak to trough.

However, industrial production could drop 10-15% from top to bottom. Output of durable goods HARWINTON, Conn.-Hurlbut G. might go down 15-20% while inventories are worked off.

The above arithmetic illustrates ventory buying in 1961, it could a significant characteristic of the U. S. economy-only about a fifth of economic activity takes place in the volatile area of durable goods production, whereas the other four-fifths displays a great resistance to a general business decline.

> This does not mean that a severe and prolonged recession is impossible. Under certain conditions a train of events could unfold to overwhelm the elements making for stability and produce an intractable recession. The odds against such an outcome in the next year or two seem very high.

> To sum up, the most probable outlook is that the nation will move into a phase of moderate recession in 1961. The decline in industrial production might run on six to nine months and carry the Federal Reserve Board index down 10-15%. However, the sustaining forces appear powerful enough to generate a renewed advance by late-1961 or early-1962.

#### Longer-Term Problems

While the economy should recover with reasonable promptness from the recession that seems to lie ahead, there will remain a serious long-term problem of achieving the sort of economic growth of which the nation is capable. Very briefly, the problem is that:

(1) There has been a definite slow - down in the economy's over-all growth rate — from 4% per annum from 1947 through 1955 to 2% during the last four

(2) The major reason for this squeeze on profits — unit labor costs have risen more than prices.

(3) Thus the rate of investment in new plant and equipment has been held down and this has slowed the advance in the economy's productive efficiency.

appropriate remedy involves two things: Reducing the tax burden on saving and investment, and increasing excise taxes if need be; and (2) Holding the ahead (that is almost one-fourth rise in wage rates within the limits of the economy's ability to pay them. With the tremendous worldwide responsibilities the nation faces, such actions are essen-

The longer-term danger in the period ahead is that the nation might resort to massive government spending to deal with the 1961 recession and promote eco-nomic growth. This route would also sap our economic vitality and not only fail to produce genuine economic growth but it would

## Politics, Prospects and Prices just as that of Russia is higher than ours. I we dare not underestimate Rus-In the American Economy

By Dr. W. L. McMillen,\* Associate Economist, Morgan Guaranty Trust Company of N. Y., New York City

New York bank economist discerns no recession for the balance of this year; denies we are on a verge of such a downtourn-which he defines; and predicts economic improvement will occur by the middle of 1961. Dr. McMillen's paper covers the spectrum of current economic news, ranging from rate of growth comparison with U.S.S.R. to prospects of inflation, and he criticizes businessmen for not timing their capital expenditures and inventory purchasing more wisely. Too often, he points out, businessmen's "timing of their spending has aggravated an already undesirable situation." The writer also points out certain facts regarding our capacity for economic growth, and the need for removing impediments to growth.

I shall state why I think the out- then he will go to work and use come of the elections will not the real ability which he pos- 1960 to 265 million in 1980. years. There is, however, a danger for the longer run in some current political thinking which will create pressure on prices. In the second portion of the discussion I shall attempt to support the view that a serious

Wayne L. McMillen

recession is Furthermore, I not impending. hope to show that those in charge of the purchases for business firms (for inventory and for plant and equipment) have a great opportunity to make a contribution to our general economic stability. In fact, their contributions could result in the next substantial step toward taming the business cycle. Lastly, I shall venture the opinion that prices will be rather stable with only a slight rise during the next six months or so, but over the next five years inflation may reappear as a paramount issue.

#### **Political Issues**

We are in the midst of our naspree. We shall continue on this "binge" under the glare of both footlights and floodlights. The audience is both domestic and worldwide. But Scotty Reston of way and only one way. It must the specifical three species of the steel volume for the base for volume. 1937 was at the peak of recovery before the recession, and 1939 was a year of recovery from the recession. So 1938 was considered the base only for the purpose of calculating the number of years, but the steel volume for the base year was way and only one way. It must assumed to be the average for the three years. 'I am the only President in his-

## Over-the-Counter Market -What It Offers Investors

By Maurice Hart,\* Vice-President, New York Hanseatic Corp., New York City.

Aware of the incongruous fact that the "over-the-counter" market is the world's greatest and yet the least known, Mr. Hart outlines the scope and mechanics of this market in order to make better known its portfolio building potentialities. In one of his comments, he shows why the floor specialist has an easier job than the over-the-counter trader who competes with as many as 15 or 20 other traders in the same issue. Noting the increased interest being manifested in the unlisted market, Mr. Hart foresees a greater growth for the market as our economy expands.

The term "over the counter" probably originated when men bought and sold securities pretty much the way they bought or bartered

supplies in a store or mill. I presume when the Stock Exchange was organized securities which were not traded on the Exchange were referred to as those "over the counter" and perhaps for lack of a better term the name stuck.

Maurice Hart

Unlisted Market.

The scope of the Over-the-Counter Market is so wide, the stantly growing economy requires. number of issues traded is so large, and the volume is so. I might say astronomical, that it has been called, and I think rightly, "the world's greatest market." Nevertheless, it is the least known and I am sure the least understood, not only by the investor, but to a great extent by the securities in-dustry itself. There are many misconceptions on the Over-the-Counter Market . . . some of them quite humorous. Recently I was part of a golf foursome. One of the members of the team was a first time. He asked me casually what business I was in. When I mentioned Wall Street and added over-the-counter securities, this was his reaction. "Say," he said, "You fellows have some racket." "Why do you say that," I asked.
"Well," he went on, "I see you bring out a stock at \$3 or \$4 a share and it goes to 9 or 10 the same day. Wow, what a mark-up." Perhaps his ignorance is excusable. But even among professionals, it Coast. Counter Market there is an amazing misunderstanding of the Overand mechanics.

The other day I had lunch with a senior partner of a stock ex- 25,000 issues will be covered in make the decisions. Their choice over the counter as are those of change firm. "By the way," he the daily service. Certainly the may be dictated by the interest Time, Inc., the world's largest publisher. The Grippell Corporation business we gave you yesterday." Naturally I thanked him and asked 'What was the order?" He said, "We sold you 100 shares of stock 'X'." He must have been surprised at my startled look. "Well," he continued, "your trader made the market 200 to 210." "How do you figure we made \$1,000," I inquired. "That's easy," he replied in all sincerity, "we sold you 100 shares at 200 and you probably sold it at 210 . . . that's \$1,000."

It so happens that the stock referred to has a very volatile market, and frequently trades in 50share lots or even less. He was completely ignorant of the fact that our trader who maintains the market in the stock might be assuming a market risk which could have easily resulted in a sizable

profession. Answering the thoutrading markets. This they do for the account of their firm whether they have an order or not. Except acts as principal and assumes a market risk. The expert trader must be adaptable and versatile to the constantly changing market winds. Some top traders make bearish and bullish at the same time. The trader's plans must al-ways be subject to immediate Our bond trading department change and he must adjust himself equally to new market conditions. Although a trader may specialize in any given stock he is not alone in the field. In some cases there may be as many as 15 or 20 other houses trading in the same secustock in which he specializes are funneled through him. In the case of the over-the-counter trader, it is a free-for-all. While the trader reads the financial pages, watches the broad tape, even the stock mation given him by the research J. A. Brady With department, he frequently has to depend on instinct, his feel of the market and a certain sixth sense.

#### Offers Top Portfolio Choices

The interest of investment security analysts undoubtedly lies in what the Over-the-Counter Market offers in the way of investment for their clients' portfolios. In this respect the Over-the-Counter Market offers a tremendous variety. It is certainly a market of exbonds to low-priced speculative issues. The securities of some of cessful corporations are available of the largest banks, insurance, and many utility companies are traded almost entirely over the counter, as are the securities of the World Bank. In addition, there are, of course, the railroad equipment trusts and many Canadian and foreign securities. To these we must by all means add the electronic stocks so currently pop-

Of course, there are many lowpriced stocks but on the other hand there are stocks like Christiana Securities which sell around world's largest lumber company, sug- (the largest pany), Anheuser-Busch, American Marietta, American Express, Bank bank), and Aetna Life & Fire Inonly over the counter. All of these, of course, are familiar names and could go on and name hundreds of others. During the past few years a large interest has developed among shrewd investors in the excellent opportunities offered in foreign securities—the stocks of such fine corporations as Phillips Lamp (the European General Electric), Unilever (one of the world's largest soap and cosmetic companies), Bowater Paper (the well-known English paper company), and Farbenfabriken Bayer (the large German chemical-drug corporation).

The research departments of the

ton, Philadelphia, Washington and very essential, perhaps the most of its large variety, offers a secu-New Haven. A well trained and essential, part of the over-the- rity analyst a very challenging opportunity.

Keep in mind that every new issue is first traded over the counter even if it's slated to be listed eventually.

Hundreds of stocks now listed be prepared to buy and sell the on the New York or American securities in which they maintain Stock Exchange were formerly on the New York or American traded over the counter.

#### Increased Interest in Over-the-Counter Issues

The interest in over-the-counter securities has increased greatly in recent years. A further indication of this is evident by the number of stock exchange firms who have either opened or enlarged their ent issues. Thus, he may be both over-the-counter trading department and a number of them have issued pamphlets to acquaint their clients with the opportunities for investment in over - the - counter securities. As our economy expands and new industries are developed there will be a constant flow of interesting new issues that will be offered to the public. In addition, many fine family-owned firms will probably be going public. Thus there will be many new opportunities for investment in future growth companies. As heretofore they will all first be available only on the Over-the-Counter Market.

## How Mutual Funds Can Meet Life Insurance Competition

By Norman F. Dacey, Norman F. Dacey & Associates, Inc., Bridgeport, Conn.

Reflections on "War and Peace" between the life insurance and mutual funds industries propose entry of mutual funds into the life insurance business by way of retaliation. Mr. Dacey admonishes the mutual fund industry to recognize it has come of age and to meet the new competition. A proposed Mutual Life Insurance Co. would provide insurance for voluntary and contractual investment plans and is said to constitute a "perfect 'variable annuity.'" Mr. Dacey comments on the unexpected effect term insurance has had on the insurance industry; avers life insurance provides no more of an investment than mutual funds provide protection; and proposes a new objective for mutual funds which would offer a growth investment for earlier years and become a balanced fund for later years.

> If the life insurance industry is going into the mutual fund business, perhaps the mutual funds should go into the life insurance business.

#### Proposes a New Mutual Fund Aim

Incidentally, there are many write similar plans for other fund: investors who would like to accumulate during their earning years in a common stock or growth fund but who recognize that a balanced fund may be more suitable at retirement. tunately, they are locked into the more volatile fund by their capital gain tax liability. The solution may lay in the establishment of a "1970 Fund," a "1975 Fund," a "1980 Fund," etc. Each fund would be a growth fund until it reached its date after which it would automatically convert to a balanced fund, not by selling its common stocks but merely by putting incoming new money into bonds.

The mutual fund industry has come of age. It is time for it to stand erect. It has fought its way upward through the stigma of a second-class investment, accepting without real protest a Statement of Policy which brands its field organization as an army of financial cut-throats. Thousands of honest fundmen, emulating the industrious insurance man, have gone out and beaten the bushes for business only to have their industry and persistence damned as "high pressure."

The average mutual fundman doesn't understand the outcry. He has just gone right on working. The next generation of Americans will owe its financial security largely to him.

## BANK AND INSURANCE Nadler Sees Improved Economy in 1961 STOCKS BY LEO I. BURRINGTON

This Week — Insurance Stocks

HURRICANE DONNA DENTS RECENT MARKET STRENGTH An abrupt setback in the strong market trend for fire-casualty stocks was the immediate result of this week's property damage lashing given by hurricane Donna as it stormed the Atlantic Seaboard. While considerable time will pass before the extent of damage by this catastrophe can be measured in claims upon individual company insurers, market psychology brought about a drop of 4 points in the stock prices of Home Insurance and Aetna Insurance; 3 point drops occurred in several issues, including Glens Falls Insurance, Great American Insurance, Travelers, and U.S. Fidelity.

Insurance coverage of catastrophes, the chief reason for the livelihood of the fire-casualty business, is one of the main essentials of modern living. Hurricane Donna provided a harsh but clear-cut experience to the public that insurance companies stand ready to fulfill their roles of insuring uncertain risks. While in this instance the overwhelming publicity carries adverse implications for insurance companies, the lasting effect may well be one of arousing the public to seek more adequate insurance coverage. Another effect may be the direction of investor attention to firecasualty stocks as investment opportunities.

This group of securities often is ignored or forgotten due to stockholder difficulty in following performance of over-thecounter issues, the status of most insurance stocks. Once directed, such attention will reveal the positive market trend existing today for insurance stocks in contrast to the general securities market. On average, fire-casualty stocks, since the beginning of 1960, have registered a gain of approximately 5%, while the 500 stock Standard & Poor's Average, for example, has declined by some 5%. Several issues, of course, far outperform the averages. To date, market appreciation by Merchants Fire Assurance and U.S. Fidelity & Guaranty head the list of the representative stocks presented.

This sustained market action is supported by the trend of net premiums written (sales) which on average are running about 5% ahead of a year ago. By midyear impressive writing gains, in excess of 14%, were registered by Northern Insurance, Government Employees Insurance, Aetna Casualty & Surety and Ohio Casualty. The table presented includes, for comparative purposes, individual company gains in investment income. The investment earnings thus far are in line with the 10% rise estimated for 1960.

Ralph J. Trapani has joined the plant of 1959.

As investment income improves, cash dividend increases can be expected, especially at this time since cash payouts remain under 50% of net investment income for fire-casualty companies as a group. Several cash dividend increases to stockholders already have been declared in 1960. Stock dividend declarations and payments this year have been made by Hartford Fire Insurance, Aetna Casualty & Surety, Government Employees Insurance, Insurance Company of North America, New Hampshire Insurance and Springfield Insurance. The most recent declaration is by Western Casualty, an 81/3 % stock dividend payable October 14 to holders of record October 3.

Thus far in 1960 acquisition activity includes American Surety Company by Transamerica Corp. and Freeport Insurance Co. by Springfield Fire & Marine Insurance. Two companies have publicly become merger candidates, Massachusetts Bonding and, more recently, New Amsterdam Casualty. Strengthening the trend toward life insurance with fire-casualty coverage are steps taken in 1960 by Great American Insurance, St. Paul Fire & Marine, and Glens Falls Insurance.

Overall underwriting experience, barring further catastrophes, should continue to trend upward due to higher premium rates in force, improved selection of risks and better expense control. Only seven of the issues presented are experiencing less profitable results. With investment income consistently improving, operating earnings for 1960 in excess of 25% over 1959 are expected to be the rule rather than the exception.

Leading economist does not expect a "boom," but a well-defined upswing in all business areas regardless of who occupies the office of President. Rules out major war.

The fourth quarter of this slightly economy which is basically sound. tarnished" golden year of 1950 will witness a slightly improved expenditures economy which should burgeon

into an even better twelve months in 1961, accord-ing to Dr. Marcus Nadler.

Dr. Nadler, economist and Professor of Finance at New York University, speaking extemporaneously, before a group of electric and

gas utilities marketing executives in New York City on Sept. 12, stated that the American economy was "in the midst of a rolling readjustment" and that "barring un-foreseen events" over-all business conditions will display greater improvement all along the line. The occasion was the opening session of the three-day 24th Annual Ebasco Services Client Companies' Marketing Conference.

# Relax let science make you comfortable

Some ordinary-looking liquids are mixed together. In minutes they react, and the mixture foams and rises to become one of today's finest cushioning materials—light, tough polyether foam. This is the magic of chemistry.

People everywhere are enjoying the restful luxury of this new foam. It can be tailor-made for any use . . . soft enough for the cushioning of your favorite chair or automobile . . . firm enough to give restful support in a mattress . . . or even firmer for the safety padding on your automobile dashboard. In thin sections, it's being used as an interlining for winter clothing and insulation for sleeping bags. And because it contains countless tiny cells, this foam in rigid panels makes a highly effective insulation for walls and refrigerators.

Many of the chemicals needed to produce these useful foams ... polyethers to form the structure, fluorocarbons to expand the foam, silicone oils to determine the cell size, and catalysts to trigger the reaction . . . are created by the people of Union Carbide. Their continuing research in the ever-changing world of chemistry promises to bring many more wonderful things into your life.

Learn about the exciting work going on now in chemicals, carbons, gases, metals, plastics, and nuclear energy. Write for "Products and Processes" Booklet L, Union Carbide Corporation, 270 Park Avenue, New York 17, New York. In Canada, Union Carbide Canada Limited, Toronto.

## THE MARKET ... AND YOU

BY WALLACE STREETE

added up to low volume and widespread disinterest.

orders. The rate was 52% in the 54% during the normally slow summer month of August.

Steel production has been a drag on the well-being of the because of too-high hopes for a ment of the economy, the auto makers, the steel rate indicated that both are doing a bit less than record business to make it a double-barreled bar to any excessive market enthusiasm.

#### New Lows to Come?

The averages, toying with their year's lows instead of with even the highs of the trading rallies, illustrated the caution starkly and, by hovering within easy reach of the areas where support developed earlier this year, kept the subject wide open of whether the 1960 lows have already been posted or whether new ones are due. Considering the sluggish action of many key issues, including the steel and auto shares as threat since they have been so well deflated already.

While the debate over whether the "market" looked lower or higher raged on, a growing number of market spectators were willing to settle for a trading market, reasonably stable, until the fate of the general economy through the fall and winter was more clear. They took comfort from the fact that, while there were trouble spots, the general level of economic activity continued on a high plane that hardly called for a raging bear market.

#### Well Protected High Yield

Then, too, individual situations of merit abound, not the least being the 61/2 % yield from Great Northern Railway. Whatever the final results, there is general agreement that the rail will cover its \$3 dividend by earnings running half again as much despite a decline in profit in the early portion of the year. The road is just entering the high-profit strike-plagued period of 1959 just as the early-month reports covered a period when activities were stepped up abnormally as customers toaded up heavily preparatory to a strike.

Then there are quality issues handled recently, such as International Paper which made the an even better payout. new lows list and in the process sold at its poorest price since 1958 although the paper industry as such seems to have made somethe world's largest producer, a strong finances, a good record for strong finances, a good record for earnings. The merger improved Avenue, Madison 1, Wis. ## Attractiveness of Ireland

By Roger W. Babson

#### The O'Dougherty Castle

The island which we normally think of as "Ireland" consists of two distinct divisions politically. The Republic of Ireland (Eire) comprises four-fifths of the area; its population is independent, and largely Catholic. Northern Ireland consisting of six counties is still a member of the British Commonwealth and is largely Protestant. It was settled chiefly by the Scotch.

The northwestern tip of this Protestant section is O'Dougherty country, which has the remnants of a Castle which Mrs. Babson's ancestors built 200 years ago. It was constantly in trouble. It was taken by the English some 40 years after it was built; then the O'Doughertys got it back for about 40 years, and thereafter the occupany of it switched from one to the other. There is a lesson here which may apply to other countries where property has been seized by the Russians or other Communists. Although the O'Dougherty buildings were burned and the cattle and tools stolen, yet the title of the real estate finally returned to the original owners. This makes me feel that well-located real estate is one of the safest investments in this troubled world.

#### The People of Ireland

The people of Ireland are most courteous and warmhearted. They have laughter and humor as well as curious superstitions. They are known as chronic exaggerators, due to their kissing of the Blarney Stone! Both the men and women are healthy, athletic, and handsome. They are very trustworthy, God-fearing working people, charmingly graceful. In my travels over the world, I have never met more friendly or happier inhabitants.

We started at Cobh and went along the South Coast, passing wonderful old castles such as the Dronoland Castle, built in the 11th Century, the Ashford Castle, and

tible bonds and preferreds that The Steamship Mauretania, upon Hotels are reasonable, the food is which Mrs. Babson and I were good, but bathrooms are scarce travelling, stopped at Cobh, Ire- and cold. #### Value of Pasture Land

Although Ireland is smaller in area than Pennsylvania, yet it has marvelous ocean frontage exceeding that of Florida. Some of this is meadow farm land extending down to the water: in other places there are high cliffs. As I worked up the West Coast and noticed this beautiful, unoccupied ocean frontage, I systematically took samples of the soil. These I will bring home with me and have analyzed. This land sells at a low price per acre and is fairly rocky, suitable, from our standpoint, only for pasturage. It also is difficult to purchase large tracts of a thousand acres. However, should think this land might be an excellent investment for those with patience who are willing to visit Ireland once every other year and talk with those to whom they rent.

I was much surprised at the temperature of Ireland. I saw palm trees growing in the southern portion, and I was told that, due to the Gulf Stream, even the northern portion is seldom freez-ing cold. The Killarney Lake section in Southwest Ireland is beautiful, and many other lakes abound throughout Ireland providing fishing, hunting, and other

#### INVESTMENT TRADERS ASSOCIATION OF PHILADELPHIA

The Annual Meeting and Election of the Officers of the Investment Traders Association of Philadelphia will be held Wednesday, Sept. 28, at the Barclay Hotel.

Nominees for office for 1960-61 are:

President: Willard F. Rice, Eastman Dillon, Union Securities & Co.

First Vice-President: John E. Knob, Drexel & Co. Second Vice-President: Jack Christian, Janney, Dulles &

Treasurer: Herbert E. Beattie, H. A. Riecke & Co., Inc. Secretary: William R. Radetzky, New York Hanseatic Corp.

#### SEATTLE SECURITY TRADERS ASSOCIATION

The Seattle Security Traders Association will entertain members of the National Security Traders Association who will be visiting Seattle after the Sun Valley Convention, at a dinner to be held Sept. 17 at the Olympic Bowl. John I. Rohde, John R. Lewis, Inc., is president of the Seattle Association. Other officers are Paul Johnson, Blyth & Co., Inc., vice-president; Larry Sisson, Pacific Northwest Company, secretary; and Robert Wight, Bank of California, N. A., treasurer.

## FROM WASHINGTON ... Ahead of the News

BY CARLISLE BARGERON

The crowds were big and enthusiastic in Idaho and Oregon, but
away. were inexplicably small and silent whistle stop on the West Coast, valedictory address, and wanting East Washington Street. sounded flat and bored at the next.

There were also the inevitable goofs, like the embarrassment at Pocatello, Idaho, when the candi-date confessed he knew nothing about the Burns Creek reclamation project—a major local issue— and then added blithely that he had voted for it twice and would continue to do so.

But the reports that reached him from local politicians were generally on the optimistic side. Alaska, where he began his campaign two weeks ago, is now counted in his column. Idaho is regarded as an uphill struggle, but in other states he stumped-Michigan, Oregon and California-he thinks he is a possible and even likely winner.

It is important to note, however, that this optimism does not indicate a conviction that he will win any or all of those states. The current polls show him running behind Nixon in California and Oregon. Rather, it reflects belief that the Senator and his backers may have the capacity to do what must be done-to present the issuesto turn out the vote and to cope with this year's special problem of religion.

So far Senator Kennedy has de-fined the choice before the people in the broadest possible terms. Dynamic action with the Democrats, versus stand-pat stagnation with the Republicans and Vice-President Nixon.

He is trying to make it a party battle instead of one between Kennedy and Nixon. It is not that he and Nixon are alone running, he contends, but a battle between the Democratic and Republican parties.

This is good strategy. In 1952 and 1956 the Republicans did not win. Eisenhower personally won. The party lost in both House and

Kennedy has dropped his chant that this is a second rate nation, having found that was not going over so well. His contention now is that, if we don't take advantage of his dynamic leadership into the world of new frontiers, we will be surpassed. He wants to deal with the problems of the unemployed, the aged, the poor and the Negroes.

The dynamism he preaches is projects most easily to his audience. With his jaw set and face uplifted, his right fist clenched, his voice straining, and the words tumbling out, he is a compelling figure in the spotlight.

He has a voice doctor accompanying him, but the doctor says Kennedy will pay no attention to him. He speaks almost altogether with his throat instead of using his whole diaphragm. This gives a constant trouble with his throat. But the intensity with which he screeches is appealing to his audience, particularly teenagers and

Unlike Nixon, he has not mastered the art of organizing and presenting a speech without the aid of notes. But he doesn't read his speech or make any pretense of it. He throws it away at the outset. What he lacks in clarity, however, he makes up in intensity.

But some of the streak of inner

BOSTON, Mass. — Irving L. Hawkes is now associated with F. L. Putnam & Company, Inc., 77 Franklin Street, members of the

The Command Guidance System for the Air Force Titan, shown here as the first and second stages separate, was developed by Bell Telephone Laboratories and is manufactured by Western Electric. Flight information is analyzed by a Remington Rand-Univac computer.

Nose cone of an Air Force Thor-Able test missile, guided by "brains" developed for the Titan, being recovered from the South Atlantic.

## How the Air Force puts Titan on Target!

Bell Telephone Laboratories Command Guidance System gives deadly accuracy to new ICBM

Suppose you were asked to guide a 110-ton missile into space with a controlled velocity so that its nose cone could then sail free of all control and hit a tiny preselected target area 6000 miles away.

This was the objective for Titan which was given by the Air Force to Bell Telephone engineers and scientists. The result was a new Command Guidance System which guides Titan with "pinpoint" accuracy.

For the first few hundred miles of flight, a ground control center tracks the missile and sends instructions to keep it precisely on course. Commands are also sent to cut the engine off at the moment of proper velocity.

To show how accurate this guidance must be: at the time of cut-off, when Titan may be traveling some 24,000 feet per second, a difference of one foot per second in the speed could cause a miss of one mile.

The system has already guided missile nose cones so accurately that they could be recovered thousands of miles away by waiting ships. And it will play a key role in forthcoming satellite and space probes.

This new guidance system is the product of our many years of communications research and experience—which also help bring you the finest telephone service in the

## Fuels Policy Proposal Analyzed

Rumblings of action to start a new National Fuels Policy with enduse controls prompts Empire Trust Co. of N. Y., in its recent "Letter," to plead for competition and not for controls. The way to obtain plentiful oil and gas, it warns, is not by creating monopoly markets.

can be met best at lowest cost and leum will continue to be abundant with abundance for the future. and low in cost," the Letter adds.

This belief is expressed in a newsletter recently published by try itself is still strong, the Empire Empire Trust Co. of New York which discusses in detail the situation created for the energy fuels industries by efforts to inaugurate the Future, Inc. which predicts Tower Building. another congressional investigation that in the next 20 years the de- Tower Building. of national fuels resources.

Proponents have urged such an investigation for the formulation of a new National Fuels Policy and originally asked for consideration of "optimal allocation of the various fuel and energy resources to their most productive economic uses"—in other words, end-use controls on consumers.

Henry C. Brunie, President of Empire Trust, in an introductory paragraph to the Letter, says that behind these attempts are serious implications to interfuel competition and to freedom of consumer choice. . . . An informed public will support competition, not restraint, as the key to this nation's continued prosperity."

The Letter points out that "today low-cost energy largely means petroleum. Petroleum means oil and natural gas. We get almost three-quarters of our energy from petroleum, most of the rest from

#### Says Controls Would Mean Monopoly

A policy of end-use controls on energy fuels "could deny all consumers - industrial, utility and residential—their right to burn oil or gas for any purpose for which coal could be substituted," the newsletter declares. "End-use controls thus establish monopoly markets, restrain competition and tend to eliminate competitive pricing when they eliminate the freedom to sell and the freedom to buy.

Continuing, the Letter points out that the "nub of the agitation for a new National Fuels Policy is the old prediction that our petroleum is running out faster than our coal. It was said that we'd run out of oil and gas, first in 1925, then by 1941, more recently by 1960. . . . Fortunately, no genuine oil scarcity ever has occurred. Right now our proved oil and gas reserves are at an all-time high."

The Letter calls attention to the fact that just recently the ultimate oil resources in continental United States recoverable by current methods were estimated by the U. S. Geological Survey at 235 billion barrels. "This represents nearly four times the total oil production since the start of the American petroleum industry" 100 years ago, the newsletter adds.

Coal resources, on the other hand, amounted to 3.5 trillion tons in 1918; by 1958 economically recoverable coal had shrunk nearly 50% to 906 billion tons, according to the Empire Trust Letter.

"When weighed in terms of price competition from competing fuels, other estimates have scaled down even this figure to as little as 30 billion tons," the Letter says. "Present coal production is at the rate of about 425 million tons per

"There hasn't been a 10-year period in which we have not produced petroleum approaching all of the proved reserves at the beginning of that 10-year period and at the same time ended the 10 years with still greater reserves," the newsletter adds.

"Thus it is difficult to see how this nation is in danger of running out of oil and gas," the newsletter continues. "The problem is to locate what we know is there.

"So long as the nation avoids tax policies and restrictive con-

Steel for automobiles: another area of growth at

The automotive industry is now completing one of its biggest years. Production will run about 11% more than in 1959. And the persistent increase in number of families. the move to the suburbs, the growth of multiple car households all point toward a steady and substantial increase in the demand for cars . . . and the steels of which they are made.

National Steel has long been identified with the automobile. The automotive industry is America's biggest customer for hot and cold rolled sheets and strip and our Detroit division, Great Lakes Steel Corporation, has consistently supplied a major proportion of these requirements.

In addition to its dramatic growth as a steel consumer over the years, the auto industry has constantly provided a fertile field for new steel products. Great Lakes Steel and also our Weirton Steel division of Weirton, west virginia, have worked closely with auto makers to meet this need for the new. Weirton, for example, recently developed differential-coated galvanized steel to solve a special automotive problem, and much greater use of galvanized, in this and other forms, is plainly indicated for the future. In such ways, we have grown along with the auto industry and we will continue to do so. This is one of the principal aims of our current \$300,000,000 expansion program. For Great Lakes Steel, it includes a substantial increase in steelmaking capacity and the "mill of the future"-which will begin operation in 1961 as the world's

fastest and most powerful strip mill and the first to have an electronic computer incorporated in its original design. Its assignment is to meet peak demands of the auto industry with the finest quality steel yet produced.

So, automotive steel is another important area of growth in which National Steel Corporation, in cooperation with its customers, concentrates its long experience in steelmaking and its research facilities on exploration of new ways to future progress.

This STEELMARK of the American steel industry tells you a product is steel-made, steel-modern and steelstrong. Look for it when you buy.

NATIONAL STEEL CORPORATION, GRANT BUILDING, PITTSBURGH, PA. Major divisions: Great Lakes Steel Corporation . Weirton Steel Company Midwest Steel Corporation . Stran-Steel Corporation . Enamelstrip Corporation . The Hanna Furnace Corporation . National Steel Products Company

ing the last four years despite holders shrank steadily. But now scattered recommendations by fin- seasoned Ford has attained in-nancial district counselors to "Gas vestment status. From 44th two up!" Joining this fraternity of the friendless in 1960 were the steels. During the last year, however, it quarterly dividend of 11 cents, Yet a spot check of the 50 most favored stocks of financial insti- the 27th slot. tutions discloses that companies in these bread-and-butter industries remain high on the roster by comparison with a year ago or even two years ago.

Thus, going back to 1958, it will be found that of the 15 top favorites of investment companies, common trust funds and insurance companies, no less than seven were oils. A year ago (Standard of Indiana) had fallen out, which left a highly respectable six among the first 15. Now Stanolind is back in the 15th spot to restore the total to seven. The other six are Standard of Jersey, far and away the No. 1 favorite among stocks of all kinds; Texaco, which is sixth in the over-all compilation, and Socony Mobil, Phil- years ago to 47th. lips Petroleum, Standard of California and Gulf Oil.

Returning to 1958, we find that there were only two steels among the top 50, U. S. Steel, which has been acquiring investment status years ago and now 37th. 16 in 1958 to the 10th spot last year and now is tied with Socony for eighth. Bessie has gone over 34 and now to 28th.

there has been no urgency to unlock strong boxes these past couple of years as the first five among institutional favorites show no change in ranking. Behind Standard of Jersey are General Motors, General Electric, American Telephone & Telegraph, with E. I. duPont de Nemours & Co. still in the fifth slot.

Interestingly, America's pre-mier growth stock, International Business Machines, continues to move up in this select group. Carrying, by far, the highest price tag of the favorite 50, I. B. M. has come from No. 17 in 1958 to occupy the 12th position. It could work its way into the top 10 in no great time.

Probably the most impressive performance of all, however, has been turned in by Westinghouse Electric. After all, I. B. M. never did lose its halo. But a few years ago Westinghouse was dubbed the Ailing Giant." But plainly Wall Streeters regard the company as completely recovered these days. From No. 27 in 1958, Westinghouse report it was 16th.

It is scarcely a secret that oil a train of unhappy stockholders. stocks have had few friends dur- Indeed, the number of shareyears ago, it fell to 47th last year. has begun a steep climb, reaching

> Utilities have woven a crazy quilt, with hard-headed investors showing considerable selectivity. Thus, American Electric Power, the most favored in this group, which was No. 19 two years ago and No. 18 in 1959, now is 20th. On the other hand, Commonwealth Edison has fallen from 15th in 1958 to 20th in 1959 and now is 24th. Texas Utilities has gone over the same span from 28th to No. 33. Southern Company makes the best showing in this division. It wasn't even among the top 50 until this summer. At latest report it was 49th. United Gas Corp., on the contrary, has slipped from 35th two

> Outside the utility division, other disappointments have been Aluminum Co. of America, which has been falling steadily and now is 44th, and Monsanto, 30th two

the past few years, and Beth- Viewed in the round, the pic-lehem. Big Steel moved from No. ture is not greatly altered. Two years ago-as now-there wasn't single railroad among the favored 50. Last year, however, the same span from No. 37 to No. Union Pacific just did manage to make the grade by coming in 50th. Indeed, it would appear that It's out again, ranking 53rd.

> Swiftly working its way into the charmed circle is Merck & Co. That top-flight drug was 85th two years ago. Last year it was No. 66. Now it has only two rungs to climb to become one of the top 50.

> Incidentally, if we rank the favorites on the basis of investmentcompany holdings alone, some striking differences do emerge. Thus, while Standard of Jersey and G. M. cling to the first and second spots even on that basis, the third-ranking issue is mighty I. B. M. Texaco is next and G. E. rounds out the Big Five.

As for U.S. Steel, which finishes eighth on an over-all basis, it comes in seventh on the basis of reporting investment companies exclusively.

All in all, it would appear that even though many of the breadand-butter equities have been sold on balance, there has been little tendency to engage in wholsale liquidation.

## Funds Report

B. C. Morton Organization has become underwriter of Peoples Securities Corp., and a stockholder in A. S. Karasick & Co., Inc., investment manager of the growth stock mutual fund.

Irving Trust Co. has been appointed registrar of the common stock of Guardian Mutual Fund,

Fidelity Fund, Inc. declared a payable Sept. 24 to stockholders of record Sept. 7.

Series B-4, and Keystone High-Grade Common Stock Fund, Series S-1, declared regular distributions from net investment income of 29 cents and 21 cents, by the Clyde Williams Investment respectively, both payable on Sept. 15.

"While the economy is not booming and standard economic indicators are conflicting, the stock market's own internal action is developing strong indications that it is preparing for a significant advance in anticipation of improving business conditions. Harold X. Schreder, executive vice-president and economist of Group Securities, Inc., said at a meeting of investment representatives at the 12th annual Mutual Fund Dealer's Conference.

"The 1960 record high plateaulevel of overall business and the stock market has masked a tremendous amount of divergent and various industries and individual stocks," said Mr. Schreder. "In fact." he added "the headed to the said Mr. Schreder. "In fact." fact," he added, "this prolonged divergence in business activity going on since 1955. For example, 1960's two major 'soft' industries -steel and automobile—have not been able since 1955 to exceed their record production levels of that year."

Desire for income is the most motives," according to Fred E. Street Group of Mutual Funds. "Investment fads sweep the as Treasurer for the coming scene," he said, "but, if experiseason is Miss Joan M. Brown ence is any guide, we know that investor interest in such fads eventually is carried to excess only to ebb away. Interest in income, on the other hand, carries steady and undiminished. Characteristically, the income motive is the most constant under all kinds of conditions; it is the most appealing to the ladies, who increasingly control our nation's wealth; the greatest need of younger people, the prime objective of future planners. Moreover, income is equally important to the potential as to the present inves-

Mr. Brown made his comments will become a general partner in in a talk on Investing for Income for a gathering of mutual fund dealers and their representatives. Broad Street Sales is general distributor of the Broad Street Group -Broad Street Investing Corporation, National Investors Corporation and Whitehall Fund, Inc.

> "All we know for sure about the economy in mid-September is that there will be a long period of growth for the United States in the years that lie ahead," according to Dr. John W. Harriman, economist for the Broad Street Group of Mutual Funds.

> "We will know more about monetary aspects when the election is over. We will know more about the character and timing of the next cyclical upturn as the year 1961 unfolds. But regardless of whether there is a continuation of the uneasy and uneven plateau we have been experiencing or a

moderate recession in the shortterm future, the outlook for the longer term is favorable.

The economist made his comments to a gathering of mutual fund dealers and representatives at a seminar in Washington, arranged by Broad Street Sales Corporation.

Investments in electronics companies are expected to absorb a sizable proportion of the assets of Techno Fund, a small business investment company that "went public" recently, according to Dr. Clyde Williams, Chairman of the Techno Fund board.

The fund already has investment interest in the National Keystone Discount Bond Fund, Resistance Corp., and is expected to make equity loans to several other small electronics firms in the near future.

Techno Fund is being managed Management Co., of which Dr. Williams is President.

Total sales of shares of George Putnam Fund and Putnam Growth Fund during August, amounted to \$4,013,000, an increase of 89% from August a year ago. For the first eight months of 1960 combined sales of the two funds totaled \$33,526,000, an increase of 96% from 1959. Redemptions increased less than 12% for the same period.

Combined total net assets of both funds reached an all-time high of \$260,785,000 on Aug. 31.

Stretching from country to country, these wires hum with activity. Today there are over 70 million phones in the United States serving homes and industry. They are a vital part of our everyday life. there's more to Cities Service than meets the eye!

It's easy to make a telephone call . . . or so it seems. But take a look at all-that's behind this modern convenience.

For instance, to take care of the more than 4,000,000 New York City phones and over 17,000,000 necessary miles of wires and cable requires over 60,000 people. Meanwhile, 7,000 scientists, engineers, and technicians are at work in this one metropolitan area seeking ways to improve the phone system.

The same holds true for the petroleum industry, too. It's a simple thing to drive in to a friendly Cities Service station, say "Fill 'er up" and drive off with a tankful of high-quality gasolene.

But to make that possible, thousands of people are at work on five continents, utilizing the most modern facilities of exploration, production, transportation, refining,

research and marketing. The investment required has exceeded a billion dollars. And to improve and expand these facilities, millions more are being spent.

Only in this way can America be given what it needs for progress-more jobs and better petroleum products.

# Puerto Rico's Tax Exemption personal property are not reto use Harry Rudick's words, if assess the reality of this risk with-garded as having these character—the Internal Revenue Service sees out reference to the particular state. Moreover, even if the lion's, not to say the state of facts. However, the Internal Revenue Service does have sidered to be engaged in trade or business and thus resident within sidiary and only a small share to an assertion that the correction

Continued from page 9

tory requirements. The section provides that a domestic corporation shall be subject to United States tax only on that, part of its income which is derived from sources within the United States of at least 80% of its gross income is from sources within a possession of the United States and 50% or more of its gross income is from the active conduct of a trade or business. Puerto Rico is treated as a "possession" for this purpose.

The statutory requirement that 80% of the gross income of the corporation be derived in effect from Puerto Rico creates two difficulties: In the first place, section 931 provides that payments actually received in the United States are to be included in the taxable gross income regardless of the source from which derived. Thus arrangements have to be made for the actual receipt of income in Puerto Rico, although once received these monies may be transferred immediately to a mainland depositary.

Apportioning Formula The real difficulty arises under

section 931 in the case of a cor-poration which plans to manufacture in Puerto Rico but sell a substantial part of its output on the mainland. For purposes of de-termining its geographical source, the resulting income is apportioned under a complex formula partly to the manufacturing, which clearly has a Puerto Rican source, and partly to the sales activity, which may well have a source within the United States. The source of the selling element is the country in which the goods are sold. As stated in the Regulations, the sale takes place at the time when and the place where the rights, title and interest of the seller in the goods are transferred to the buyer. This is the so-called title passage rule, under which point of passage, where the risk of loss of the goods shifts from the seller to the buyer, is a matter of the intention of the parties. This intention is normally expressed in the contract of sale. Thus a contract f. o. b. San Juan calls for delivery to the buyer at that point; title to the goods passes at that point; and under the title passage rule Puerto Rico is the source of the income from the sale. Conversely, delivery is made in the United States if the contract is f.o.b. New York.

The title passage rule is qualified in the Regulations by the statement that it will not be followed where the sales transactions has been arranged in a particular manner for the primary purpose of tax avoidance. This long standing qualification really expresses the dissatisfaction of the Treasury with the rule. This dissatisfaction is due in part to the fact that the broad coverage offered by insurence companies. offered by insurance companies today has greatly minimized the today has greatly minimized the business importance of the point at which title passes. There are several cases pending in which the Treasury is again urging, despite its lack of success in the past, that the source of income on a sales transaction should not necessarily turn on the place where title passed. Instead, the Treasury is urging that the place where the sale was negotiated is the place where the substance of the place where the substance of the transaction took place, and hence the source of the income.

The risk of this uncertain state of the law to a domestic corporation under section 931 is that part of the income attributable to the selling side of the business may be assigned to United States sources in an amount sufficient to disqualify all of the income of the corporation from the benefits of section 931. In this regard, it will be recalled that these benefits

apply only if at least 80% of the gross income of a corporation is derived from Puerto Rico.

In the case of a Puerto Rican corporation, the question of where title passes and the status of the title passage rule for determining the source of income are very much less important. If the corporation is not engaged in trade or business in the United States, then, as in the case of other for-eign corporations, no part of its gross income from manufacture and sale will be subject to United States tax, even though part of that income may have a United States source. The reason for this result is that non-resident foreign

#### Period

In discussing the benefits of the Puerto Rican tax exemption program, it may be that we overemphasize the attraction of a taxfree liquidation before the end of the exemption period. The success of the business enterprises already established in Puerto Rico by mainland investors suggests that in most cases the investor will prefer to continue the business beyond the exemption period. In these cases the great advantage of ical income from United States product to its parent or an affili- from distribution of the goods in the program is that it provides sources, and gains on the sale of ated corporation on the mainland. the United States. ## **Europe Termed** Food Producer

Chase Manhattan Bank recommends to Europe a farm policy that includes importing more food and releasing labor inefficiently used on farms to industry.

The six nations of the European Common Market have not yet solved their basic agricultural problem. Economically speaking, there are too many farmers, too many farms, too much inefficiency, too many controls, and too much protectionism in agriculture on the Continent. This opinion is expressed by Report on Western Europe, The Chase Manhattan Bank's bimonthly survey, in the latest issue, published Tuesday, Sept. 13.

The six governments are now considering proposals for a com-mon agricultural policy presented during the summer by the Common Market Commission. These proposals are an attempt to grapple with farm problems of the six countries on a European scale, the bank publication points out.

"A common agricultural policy would have great economic significance, both to the Common Market and to the rest of the world," says the Chase Manhattan report.

"Within the Common Market, agriculture accounts for 13% of total production and employs roughly one quarter of the labor force. To other countries, the Six together represent the world's largest market for agricultural goods.

As a high-cost producer of food, says Report on Western Europe, "the Six could, with great economic dividends, import more foodstuffs and gradually shift resources from some lines of agriculture to industry where labor is in short supply. In short, the real problem is not only to strengthen but to shrink the base of agriculture in the Six over the long term. There are great political problems in putting through such a program. But, to the degree that the Commission's agricultural policy leans in this direction, it will favor the over-all interests of the Common Market."

## Our Reporter on GOVERNMENTS

BY JOHN T. CHIPPENDALE, JR.

funding" offer of the Treasury are those money market specialwas announced at the end of last ists who believe that the business The offer of new 31/2% bonds, in addition to the one long-term obligation now outstanding (it was put out in bring about an easier tone for 1958) in exchange for selected issues of the World War II 21/2s was in line with expectations of the financial district. The Teasury has set an overall limit of \$7,000,-000,000 in this exchange offer, but apparently will be willing to accept a lesser amount.

The issues involved are the 21/2s due 1962-1967 which the Treasury will accept in unlimited amounts for a new 31/2% bond due Nov. 15, 1980. The 21/2s of 1963-1968 will be accepted within limits for the 31/2s due Feb. 15, 1990. This bond is presently outstanding, having been floated in 1958. The Treasury will also accept the 21/2s due June 15, 1964-69 and the 21/2s due Dec. 15, 1964-69 along with the 21/2s of 1963-68 in the combined amounts of \$4,500,000,000. The 1964-69s in exchange for the 3½% bond coming due on Nov. 15, 1998.

#### Successful Operation Indicated

The refunding operation will be open until next Tuesday, Sept. 20. This long expected "forward refunding" offer by the Treasury since one of the uncertain forces overhanging it has now been removed. The opinions in the financial areas are that this will turn out of be a very successful undertaking by the Treasury with a sizable amount of the \$12,474,-000,000 of the 21/2% bonds being turned in for the refunding 31/2s.

The movement of quotations in Government securiites is not likely to be very decisive in either direction until the fall pattern of business is more clearly defined. It is evident that there is not too much agreement among economic experts as to how the business cycle will move in the forecastable future. Certain money market advisers hold the opinion that the economy will move pretty much along current lines for the balance of 1960 and this makes a policy of money market ease such as we have been experiencing quite likely to be the order of

Specialists in

U. S. GOVERNMENT

and

FEDERAL AGENCY SECURITIES

AUBREY G. LANSTON & Co. INCORPORATED

CHICAGO

BOSTON

The much awaited "advance re- the day. On the other hand, there pattern will assume a more defensive trend as we move towards the end of the year and this will money and credit. This could be accomplished through the direct purchases of Government securities (the short-term liquid issues) by the Federal Reserve banks or by another lowering of reserve requirements by the Federal Reserve Banks.

Lower Rates Possible

However, there is a limit as to the amount of ease that might develop in money and credit, because of a downturn in the economy. It is evident that the cost of obtaining funds cannot go so low that we will be faced with a wholesale withdrawal of foreign funds through the medium of gold being taken from here.

Nonetheless, money rates could go lower than they are now before gold will be leaving here in sizable amounts, in the opinion of many money experts, because foreign Central Banks, the largest owners of funds here, will not pull out their balances because of lower interest rates. As long as the dollar remains a sound curwill help to clear the air for the rency, as it is now, these balances long-term Government market of foreign Central Banks are not likely to be disturbed because of lower interest rates due to a more defensive economy.

continues to go ahead at an incorporates and tax-exempt issues getting their proportionate share of this money. At the present time it is evident, however, that the non-federal securities are getting a larger amount of these funds than are the Treasury obligations because the yield in the former issues is more favorable.

#### **Equity Money Going Into** Treasury Issues

However, a not insignificant amount of funds is being put to work in selected Treasury securities, ranging from the near-term issues to the most distant maturities. It seems as though common stock monies are being invested in Treasury bills and intermediate-term obligations with the World War II 21/2 % bonds being among the leading issues being bought by this group.

Commitments in the longerterm Government bonds seems to center mainly around the 4s of 1980, the 31/4s of 1985, and the 3s of 1995, which appears to indicate that, in addition to pension funds, there are also purchases being made by those institutions which have in the past put most of their monies into equities. This movement of common stock funds into selected Treasury issues could build up with a defensive tone to the economy.

According to advices, the intermediate-term Government issues with the highest discounts appear to be attracting the type of buying which is believed to be interested in trading these securities with not too much of a price movement. In other words, it looks as though a (stock) trading group is becoming interested in selected middle-term maturities.

fixed income bearing obligations mist, however, might seize upon this as supporting his forecast, for creasing rate with Governments, in recent years the housing in-corporates and tax-exempt issues dustry has been contra-cyclical.

#### Prospects for Rest of the Year

What are the prospects for the less than honest if I led anyone to believe that I know. One might find plenty of evidence to justify the position that we're on the tistics of activity, but watch for the items that cast a more accurate shadow on the future. I indicators have been performing to give them the usual attention, we would have to conclude that the pickup this fall and winter might be less than seasonal and that we are near a period of receding business. Most of these leading indicators reached peaks during either the second quarter of 1959 or the fourth quarter of 1959. But during the second quarter businessmen were frantically preparing for the steel strike and during the fourth quarter they were frantically trying to make up for lost time. If this is true then we should discount to some extent the story that these indicators usually foretell, but we cannot dismiss them.

On the other hand, most inventories are low in relation to sales, capital spending continues at a high rate, and steel operations have been far below steel consumption, indicating that either steel production must soon go up rather drastically or consumption must decline abruptly.

During the past 18 months the Federal rate of deficit has changed drastically to a Federal rate of surplus but now this radical and depressing impact of the change the economy is behind us Changes the next few months will e moderate. Treasury cash operations were running at a seasonally adjusted annual rate of \$6 billion deficit in July of 1959 and a seasonally adjusted annual rate of surplus of \$7.2 billion in July of this year.

Government orders during the number of people in our economy level they are relatively low in first half were relatively low, but decade. should be a matter of concern to relation to sales (1.78 months) and are now being increased. State all of us. To those affected, it those of manufacturers of non- and local government spending may be a personal tragedy. But I must point out that the balance of the year? I would be current business expansion is getting old as such expansions usually go. Such a period is one for unusually careful planning. The careful planner thinks ahead verge of a recession. Usually when about his various courses of acwe're looking forward we don't tion under three alternative asdwell on the usual current sta- sumptions: (a) that the economy will continue in a straight line that the expansion will accelerate, and (c) that a decline must frankly state that these may be about to set in. He then watches the situation closely and rather badly this year. If we were puts the appropriate previously considered alternative set of plans into action.

#### Prices

Inflation is a vicious monster -but to so many of us she is a secret but fascinating flirt. inveigh against her to our friends but when they leave, we call her for a rendezvous. We think we can beat inflation, and some of us do. Inflation would not be a problem were it not for the fact that so many of us secretly want stable prices for the other fellow's product, but want rising prices for our own product. It would be so nice for our salaries to go up each year while the prices we pay remain static. For most of us this can be only a dream. But dreams are made of potent stuff and no wonder we force our candidates to promise us that (a) they'll provide us with many things, and (b) it really won't cost us much. There has been an unmistakable bias toward inflation. Most of us need only a mirror to see who really is to blame.

Good management dictates that we deliberately operate with a deficit during a recession and a surplus during good years. History tells us that since the War we have had about three good years for each bad year. You'd think then that during the past 12 years we'd have had a net surplus in the aggregate 4 We didn't! We ran short in respect to our official budget by \$33 billion or an average of nearly \$3 billion per year. We must do better during the next

But business and labor are also to blame for inflation. Because the biggest single cost of doing business is labor cost, I suppose we must conclude that the biggest single cause of our inflation has been the fact that in the aggregate wages have consistently risen faster than productivity. Some of our businessmen also have been at fault. Some price increases are not justified and thus not in harmony with the businessmen's own long term interests. There is featherbedding in both labor and

men now have the knowledge and stable. the opportunity to make a major contribution toward economic staand in a way which is compatible with, and even contributes toward, their own self interest.

Symbolic of the more progressive planning was a statement attributed to Roger Blough, Chairman of U. S. Steel. When asked if he planned to curtail capital expenditures in view of the then existing steel production rate of about 50% of capacity, he answered, "If anyone really wants to make capital expenditure dollars go as far as possible, now is the time to do it . . . and with our reduced operating rate there is less interference with pro-duction when we install equip-

A similar improvement in planning is required for inventory purchases. These are the challenges for you businessmen. A major cause of recent cycles has been erratic and ill-timed business purchases. An improvement in our general economic stability is in part up to the businessmen. Everyone would profit.

#### Inflation Yields Unemployment

The solution to the price problem (and the political dilemma connected therewith) lies in part in the necessity to recognize the truth of this equation. Purchasing power does not rise evenly among all groups. Continually rising prices may cause us to price ourselves out of some foreign markets (\$17 billion), then a portion of the retired citizen market (\$30 billion), followed by a portion of the schoolteacher market (\$7.5 billion) and so on. After each step we need fewer workers to supply the goods and services for these groups, and workers may be furloughed. If the process moves far enough and fast enough, at worst it means catastrophe. If it moves slowly it will at best surely retard economic progress. If enough of us ask more of the economy than we put into it, we may find even ourselves among the unemployed. Think of the benefit to all if this point were put across to the electorate!

In spite of earlier inflation, we have in general enjoyed stable prices for the past year and a half. Consumer prices have slowly edged upward, wholesale prices have been steady, and raw material prices have gone down.

How about future prices? The responsibility rests upon all of us. There are now relatively few shortages of capacity. There are scarcely any areas of the country where there are critical shortages of labor, although there is a moderate shortage in several cities (but there is a critical oversupply in others). The budget is in balance. Recent wage contracts have been inflationary in nature but not so much as in earlier years. What we've been having is almost the ideal-a reasonably high level of prosperity along with reasonably stable prices. Based on the foregoing facts, it would seem reasonable to expect reasonably stable prices for the near-term future—say for the next year. The tendency may be for only a slight

But how about the prospects for the longer-term? I believe the people are becoming more literate on the subject of inflation. I believe they have some doubts about having their cake and eating it too. But I also believe that many of the pressures are still there and that most of us at least partially believe we can take more from the economy than we put into it. Unless we become completely convinced that inflation is the road to unemployment, the outlook during the next five years will be for rising prices with some interim periods, such as the pres-

time since 1946. Many business- ent, when prices are temporarily Donbar Common

#### The Growth of Saving Through Life Insurance

The principal channel of saving by the American people in the past 60 years has, of course, been life insurance. During that period, over \$106 billion of savings have been accumulated through the channel of life insurance. The figures are that in 1900 the savings accumulated by the American people through life insurance amounted to the modest sum of \$1.7 billion. At the end of 1959, accumulated life insurance savings had risen to \$108 billion.

The tremendous growth of saving through life insurance is, of course, partly the product of a growing national economy. One would naturally expect life insurance sales to increase as the economy expands. More important, however, and easily over-looked, is the great contribution which the productive investment of life insurance funds has made to the growth of our economy. Let me illustrate how the life insurance business has contributed

to economic growth. The 12 years since 1948 have witnessed a great burst of growth, and our business has been a vital factor. During this period (1948-1959, inclusive), American busiand industrial corporations have borrowed net new money amounting to about \$53 billion in order to aid in financing new plant and equipment and for working capital. Of this total, nearly \$29 billion was obtained from the life insurance companies of the country. In other words, 54% of the net new money obtained in the capital markets by business and industrial corporations to finance their expansion, modernization, and working capital requirements in this period came from life insurance companies alone. About 70% of these funds went to business and industrial firms, with the remainder going to public utilities, and in small measure the railroads. Please note that I specifically mentioned the net new money supplied by life insurance companies to business and industry. Actually, due to repayment of existing loans by corporations, the life insurance companies actually made a much larger volume of have reliable figures which show that in order to increase their growth of the American economy. holdings of corporate bonds by \$29 billion during 1948-1959, the life insurance companies actually purchased something like \$85 bilour industrial investments.

But it would be a mistake to insurance saving—and the contribution to economic growthhas been limited to the purchase of the bonds of business and in- trend. dustrial firms. During the same period, 1948-1959, the life insurance companies added to their holdings of mortgages on business and industrial properties, and apartment buildings, in an amount equal to \$10.5 billion. Since the total mortgage debt of this type

have been employed to build office buildings, warehouses, department stores, shopping centers, and many other commercial and industrial facilities which have meant so much to the growth of the country. It is largely through this channel that life companies have provided millions of dollars of financing to small business concerns.

Perhaps most interesting is the enormous contribution which life insurance savings have made to better housing of our people, which certainly improves our productive capacity as well as our living standards. During these past 12 years the life insurance companies have expanded their holdings of mortgages on 1-4 family houses in an amount equal to \$20 billion. In other words, about 20% of the total increase of \$103 billion in home mortgage debt in the country as a whole during this period has gone to life insurance companies. But this again really underestimates the total impact of life insurance companies in home financing because it does not take account of amortization of mortgages and other mortgage repayments. We have reliable information which shows that since 1946 the life insurance companies of the country have actually made about \$46 billion of home mortgage loans, of which \$13.5 billion have been FHA-insured loans, \$10.5 billion have been VA-guaranteed loans, and approximately \$22 billion have been uninsured home loans. Just think of what this means! If we were to assume that the average mortgage loan during this period was \$10,000 (a reasonable assumption), the life insurance companies provided the financing making possible the purchase of homes by 4,600,000 American

These, then, are the principal vided the financing of sound ecoment bonds which have provided and other public improvements. The same is true of direct investfacilities, and many other invest-

decades the volume of saving accumulated through life insurance approximately doubled, or more than doubled, each decade. The annual percentage gain in accumulated saving through life in-surance ranged from six to 12% during this period.

The decade from 1949 through 1959 definitely began to reveal a slowing down of saving through life insurance. Accumulated life insurance savings rose from \$57.8 billion at the end of 1949 to \$108 billion at the end of last year, an increase of \$50.2 billion, or These figures in themselves might not seem a reason for concern were it not for the fact that during the six years from 1954 through 1959 the annual amount of saving through life insurance annual figures falling within the narrow range of \$5.2 billion to \$5.5 billion. The percentage increase in accumulated saving has surance savings perform during the 'sixties as they have since 1954, total accumulated life insurance savings in the decade will increase about \$55 billion, or a little more than 50%-far below the doubling of earlier decades. This is not a happy prospect in ahead for the sound financing of economic growth.

#### Reason for Slowed-Down Growth

mind. Studies which we have made indicate that the basic reason is that for a considerable period the life insurance companies have been writing an increasing portion of business that involves little or no element of nomic growth. They are not the and group business, and away only ways, however. Time does from permanent cash value inpermit me to go into other types surance which involves the acof life company investments of cumulation of savings. In addilesser magnitude such as the pur- tion, our growth in the pension chase of state and local govern- field has slowed, apparently because of tax and investment adthe financing for toll highways vantages enjoyed by the uninsured pension funds. A further important reason is that during the ment in real estate and housing last several years there has been a noticeable rise in cash surrenders and policy loans. Surrender loans to business and industrial Thus, the productive investment benefits, for example, have risen corporations in this period. We of life insurance savings has been steadily from \$644 million in 1952 a major source of the rapid to \$1,452 million in 1958, and growth of the American economy. policy loans from \$506 million in 1952 to \$1.1 billion in 1959. In addition, there has been a noticeable tendency for funds left on deposit with life companies un-

In part, the increasing propo prospects are for saving through tion of life insurance sales incers of our companies in a way life insurance. What is the cur-volving little or no element of that provided the financing for rent trend of life insurance sav- saving is the product of changing a wide variety of growthing? Here we come right up sales emphasis in the business. In producing ideas. Time, unfortunagainst the disturbing fact that part, also, the slowing down of ately, does not permit detail on life insurance seems to be losing life insurance saving in recent the tremendous diversification of some of its vigor as an expanding years has undoubtedly been the product of reduced confidence on saving through life insurance in the part of the general public in think that the investment of life the past several years has slowed the stability of the value of the down perceptibly. Only time will dollar, Inflation—or the fear of tell whether this is merely transitory or whether it is a lasting climate favorable to saving through long-term fixed-dollar The facts in brief are these contracts. Instead, the expectation During the first five decades of of inflation discourages saving in

Unduring the past decade. ings annually through uninsured der a system of free markets and corporate pension funds, such as free choice by individuals, ecothe Bell Telephone System fund nomic growth was considered to be the inherent product of free from \$700 million in 1948 to \$3.3 initiative and the desire to improve one's living standards. The role of Government was primarily has rested on a plateau with the mulated through mutual funds conceived to be the maintenance have risen from \$2.3 billion in of a favorable climate for the growth-producing energies of our people. A primary function of Government was to preserve vigdeclined steadily from 6.9% in stock prices, but in any event the orous competition and to encour-1954 to 5.3% in 1959. If life in- growth has been spectacular. On age individual initiative in saving investment spending and industrial innovation. The concept of capacity for growth in the period, the role of Government has been changing, but this is still the basic view of many-perhaps the majority-economists in this country. However, there are some who would assign a different, much more aggressive role to the Federal Government in accelerating economic growth.

As an example of this latter approach, last year the Joint Economic Committee of the Congress, under the chairmanship of Senator Paul Douglas, conducted an investigation of the general will undoubtedly readily come to stitutions which have a highly question of how to obtain faster economic growth without inflation. The report of the Committee staff, later followed almost to example, means a larger flow of the letter by the majority report of the Joint Economic Comfinancing. The comparatively mittee, presented the following arguments:

(1) Economic growth slowed substantially after 1953. GNP rose at an average rate of 4.6% between 1947 and 1953, but growth slowed down to 2.6% between 1953 and 1959. Let me say, parenthetically, that one must be wary about the use of statistics.

(2) Tight money and a restrictive Federal budget policy led to this slowdown. These policies held down housing and industries supplying goods and services to Federal, state and local governments. The lack of purchasing power in the hands of our people kept expenditures for consumer goods

important source of savings for Federal budget policies since 1953 the financing of sound economic did not check inflation. Inflation growth. There are great oppor- was not general; it was concentunities ahead of our business, but trated in three areas: machinery there are also dangers, which we where demand was excessive; must recognize. Let me spell out autos and steel, where producers had market power to raise wages We are now in the midst of and pass on higher costs in higher a hot political debate about the prices; and in services such as

(4) The evidence since 1953 indicates that a somewhat faster while having only a minor impact

The recommendations of the staff of the Joint Economic Com-

(1) Maintaining a high level of the emphasis should be placed on

much easier than in 1955-1957, to earn this higher rate for a The proper role of monetary considerable period even though policy should be to prevent a creeping inflation from becoming should decline. At the present a gallop, while keeping interest rates as low as possible.

(3) Federal budget policy should be used vigorously to support economic growth and dampen business cycle fluctuations. Federal spending for schools, public works, health, and research should be increased. Taxes should be cut in recessions and increased in good times to provide surpluses when inflation threatens.

(4) To reduce the instability of the economy, direct controls by the Federal Government should be imposed on such areas as consumer credit, housing, bank loans to carry inventories, and perhaps, business investment in new plant and equipment.

inflation is a serious problem, the approach should be to reduce the market power of large producers through anti-trust action and lower tariffs. If such actions do not succeed, then the "profits
—wages—prices" spiral should be checked by successively greater Government intervention, leading ultimately to direct controls over prices and wages.

These, then, are the views and recommendations of the staff of the Joint Economic Committee (endorsed by Senator Douglas and the majority). I suggest tooking at the party platforms to see whether the Joint Economic Committee's work was an idle exercise. The limitations of this paper do not permit me to go into the anti-inflationary Federal policy merits of these arguments. However, I am sure that many will agree that they have vital implications for the life insurance business. My own view is that sound growth requires public and private measures to stimulate saving and investment in our economy. It requires above all stability in the value of the dollar, because inflation destroys the will to save and is thus the enemy of growth. To attempt to force a faster rate of economic growth through expanding Government spending and easy money has grave inflationary implications for the life insurance business and for the welfare of the country as a whole.

#### The Role of the Life Insurance Business in an Expanding Economy

What then should be the role of the life insurance business in our expanding economy? I would sum it up as follows:

(1) In view of the Communist threat to the security of the free world, a faster rate of economic growth in this decade is of vital importance.

(2) The only way to obtain a faster growth on a sound basis consistent with the preservation of our system of political and economic democracy is to achieve a higher rate of national saving and investment spending. Any attempt to achieve growth via the path of easy money and Federal deficit spending will succeed only producing inflation, and will the people to save.

to save through life insurance.

the general level of interest rates level of common stock prices, moreover, the average return to investors is about 31/4%. On this basis, it takes a large expectation of capital gains to offset the much higher rate on life insurance investments-and remember the advantages of compound interest. So, permanent cash value ment, aside from the tremendous advantages it provides in the way of protection against unforeseen contingencies. The life insurance business has a great opportunity and a responsibility to rededicate itself to stimulating national saving, and it is gratifying to see that many companies are intensifying their efforts through imnd equipment.

(5) If it should turn out that the investment advantages of life insurance.

(5) There is no need for the life insurance business to be defeatist about the inevitability of inflation. Inflation is man-made and can be held in check by wise public and private policies. The American people have come to realize this in the past year. However, success in checking inflation requires eternal vigilance.

(6) The life insurance business has recognized its responsibility to aid in combating inflationary policies-whether public or private. This has been done in part through a campaign of public education and in part through a more direct effort to encourage measures. I believe that in this decade, with the great danger that our Government will be constantly tempted to pursue faster is not always a sure sign that economic growth through infla-stock is available for distribution tionary programs, it will be vital but it (like some of the other that the life insurance business equip itself thoroughly to have much more powerful direct influence with public policymakers toward the end of avoiding infla- long time also is desirous tion. Over-the-Counter Situations

lack of volume indications that lation and distribution can sometimes be detected by price and volume action when observed by a trained technician. This opporcomes to non-listed stocks. There times they can be helpful to you. beware" world and don't forget it. are, however, some automatic checkups that can be used which are helpful in attempting to judge the technical situation pertaining to such a security at a particular time.

Note the Firms Making a Market

Sometimes a stock is analyzed by a broker and copies of the material are widely distributed among other brokers and individuals. If this data is released by a firm that has not taken an active trading interest in the stock in the past, it may indicate that they are attempting to create a buying interest because they have a supply of stock for sale. If they have been active in the stock in the past, it will show up in the records available to any registered dealer in securities. This is not always a sure sign that clews) may be a straw in the wind. It could also be possible that a firm that has made a trading market in the stock for a of creating some buying interest.

#### Check Bids and Offers

Go back through the records corded bids and offers pertaining to the subject security. A check of these figures backward for at least six weeks is sometimes helpful in determining the marpast; and any changes of particular interest. 55,000

Carloads Worth of **New Industry Located Along** Coast Line Last Year!

The 218 industries that were developed along Coast Line's tracks last year will provide an estimated 55,000 carloads in extra shipping business during 1960. The number of new industries is an increase of 79 over 1958, and reflects the impact of our intensive campaign to interest industrialists in the Southeast Coastal 6.

Our skilled staff of industrial development specialists, including geologist, foresters, and agricultural experts, provide a genuinely valuable service to expanding industry. In turn, the communities served by Coast Line benefit from the additional jobs, payrolls, and local trade created by industrial growth.

A close relationship—as partners in progress among industry, Coast Line, and the states and communities in the dynamic Southeast Coastal 6 is sure to pay off for all in years to come.

> "Thanks for Using Coast Line!"

#### AS WE SEE IT Continued from page 1

which such an astounding result was obtained for the purpose of determining whether the figure could be accepted as even half accurate. An "average rate of growth in this country" is itself somewhat of an enigma—the rate depending upon disputed concepts of growth and of rates and of how they are to be computed, but it is perfectly obvious that even if some "average rate" of growth is stipulated, an infinite number of different pecuniary effects might well be felt by individual working men to say nothing at all about "every working man." We can only hope that if not "every working man," then at least most working men in this country will know how to appraise such statistical balderdash.

But the candidate has other use for this rate of growth idea, which as is well known has taken firm hold upon labor union leadership in and around Detroit. "With a really healthy rate of growth," he tells us, "this country can have full employment for all who want a job; with a really healthy rate of growth we can pay for all the defense that this Administration said we can't afford. With a really healthy rate of growth we can afford the best schools for our children and the best-paid and the besttrained teachers. And, finally, with a really healthy rate of growth we can talk about an economic crusade for justice." To the Senator it seems that all our economic problems are very simple. All we need is a "really healthy rate of growth," and, of course, the candidate, if elected would, we are assured, see to it that such a rate of growth is attained, which a President can do, apparently, by merely setting "before us our national goals.

But the Senator is convinced that still other political nourishment is to be wrung from this rate of growth buncombe. For that purpose he lists three "facts"-some of which are as doubtful as his \$7,000 gem, and all of them grossly misleading if taken out of their context. The "facts" are:

- (1) "Our economy, under the first six years of the Republican Administration, grew one-half as much as under the last six years of the Truman Administration.
- (2) "The Russian economy is growing at three times the rate of ours.
- (3) "Last year the United States had the lowest rate of economic growth of any major industrialized society in the world."

Now we wish we could be sure that there was no need to point out again for the thousandth time the major fallacies of such "facts," but perhaps it is better to present once more, at the risk of boring the reader, some of the major weaknesses of this type of reasoning. As to fact number one: The last six years of the Truman Administration were years immediately following a devastating world conflict when consumers the world over were starved for all sorts of goods and this country felt it its duty to send billions of dollars in goods free of all charge to many stricken areas. They were also years immediately after an enormous inflation of the currency and credit, largely incidental to the conduct of the war. The candidate does not take the trouble to mention the fact that prices consumers had to pay for what they bought rose 25% during the six year period—and that after an increase of some 18% in the single year immediately preceding the six year period. All this without reference to the very questionable concept of economic growth as the increase in total output—a subject which we have more than once discussed in these columns.

#### Those Russian Figures

As to "fact" number two, how does the candidate know what the rate of growth is in Russia? Does he accept the figures handed out by the Kremlin? Does he include all sorts of production, or only those for which official figures are readily available—that is industrial output? Does he make any allowance at all for the different stage of industrial and economic development in the two countries? Is he, or his statistician, not aware that the smaller the point of beginning, the larger any given amount of increase will be when presented in percentage form? Is he, or his statistician, ignorant of the fact that industries or nations, like animals, tend naturally to grow faster when younger — that is when stated in the form of a "rate"—than in the later years? Is it not about time we put an end to all this statistical nonsense about Russia and its growth in recent years? Their progress has without doubt been great, greater in certain limited fields than has ours, but let us keep our statistical computations within reasonable bounds.

As to "fact" number three, let it be said without waste of words that the "rate of growth" over any one

year period makes no sense. Changes in total production -which the candidate's statisticians use as synonymous with growth—vary enormously from one year to another. It is what is now so glibly referred to as the "business cycle." Such short-term changes are not "growth" in any real meaning of the term, but the usual and inevitable

ups and downs of business.

Senator Kennedy is a victim of growthmanship, and its many, many quirks and serious fallacies. So evidently is his party. So also is labor union leadership. Which doubtless accounts for this elaboration of nonsense on Labor Day in Detroit. But may kind Providence save the rest of us from such buncombe!

## Achieving Real Growth and Preserving Our Way of Life

Continued from page 1

toward a larger and larger government with an ever broadening scope of operations. Party platforms and speeches by the Presidential candidates seem to indidrift is going to continue. Such a drift makes more acute the necessity for reappraising what the role of government should be in an economy such as ours. We must role of government as to jeopardize our basic strength.

Before we alter too much or discard the system we have, let us note first that the United States of America today has the highest standard of living of any country in the world. Let us note second that no other country can match ours in the broad diffusion of its living standard to so high a percentage of its populace. And let us note third that our present and past record of outstanding productive achievement—on a scale not even closely approximated by any other country was made with an economy that was relatively free of government planning and dominance. All this was attained with a measure of individual economic freedom unmatched anywhere on this globe. This we should never forget.

#### **Expects Increased Federal** Spending

Nevertheless, it is only realistic to expect some increase soon in governmental expenditures on the Federal level, in response to the demands of those who insist that growth should be stimulated by expanding public spending. That being the case, thoughtful leadership must insist that such spending should be directed into chanthat stimulate increased growth; and that those non-essential Federal expenditures that are not conducive to growth, should be avoided and eliminated.

This, then, raises the question of what expenditures are conducive to growth; what causes growth to happen. The answer depends upon a lot of things but mainly upon how best to develop and utilize available human, natural and man-made resources. They key to growth is how our nation gears itself toward investment for the future; since eco-nomic growth and progress depend primarily upon investment for the future. And the higher the growth rate that is sought, the higher the quality and the greater the amount of investment is correspondingly needed.

#### But Not Any Kind of Spending

When it is said that to accelerate growth we need increased investment, a broad definition of investment is presupposed. There should be included first what is usually included in investmenttangible new, modernized and expanded plant and equipment. Second, there are expenditures for as surely an investment in the ernments.

future as are expenditures for plant and equipment. Here, we are thinking primarily about investing in education and in research and development.

My concern is not only with incate at the very least, that the creasing the amount of investment several useful new public services but also with enhancing the form of it. To raise productivity our bodies technological and organinot, in my opinion, so change the zational advances. When such a without promoting inflation. policy is followed in the acquisition of new capital goods and is complemented with investment in both education and in research and development, a firm basis for accelerating economic growth will have been established.

These investments in intangibles are particularly important in ceive the most. The production of this day and age. The world is agricultural surpluses adds undergoing a series of rapid and marked changes. The emergence of new nations in Africa and Asia, the forming of new economic groups in Western Europe, the rising Communist menace throughout the world, all attest to the fact that these changing times are demanding some change in our attitudes and actions so that we may better organize and gird ourselves to cope with current and potential circumstances.

#### Foolhardy to Waste Our Resources

As has heretofore been suggested, the Communist threat particularly demands that we use all of our resources and potential. At this juncture of the Cold War, it is both criminal and foolhardy to waste our manpower resources by not affording sufficient opportunities for capable and bright young people who desire to go to college or vocational school but find themselves financially unable to We canont afford to let talented young people waste their lives at inferior jobs just because they were financially unable to develop their talents to the full. Neither can we afford to waste the talents of our Negro citizens by denying them equal education and job opportunities.

But this does not mean necessarily that the increased spending must be at the Federal level. Federal spending should be limited not only to those functions which have a true national charand that is, capital spending for acter but limited to those that cannot be performed efficiently or economically by private enterintangible services which are just prise or by state and local gov-

Urges Ending Wasteful Spending

While it is important to increase spending in areas which are conducive to growth, it is in some ways more important to eliminate non-essential spending in areas which are not conducive to growth. Particularly illustrative of the type of public spending that should be eliminated is the whole area of spending that wastes resources to serve the interests of minority pressure groups at the expense of the genpressure eral welfare. We simply cannot continue such profligacy. I have in mind here such wasteful spending by the Federal Government as expenditures for farm subsidies and price supports and for excessive non-war related veterans

Badly needed public services are denied to the country because of the excesses of farm politics, public works, and aid to veterans that has nothing to do with their services as veterans. The point that matters is that with fiscal resources strained, it is difficult ot obtain, except through elimination of political wastes in existing services, the contribution that can make to growth. In short, we can't get the benefit of such emphasis should be on promoting contributions by ignoring wastes investment of the kind which em- and trying, naively, to pay for services through deficits new

> As one concrete example, let us consider for a moment our Federal agricultural program. Under this program we tax the general public for the benefit of a small minority who are engaged in farming. In many cases those farmers who need the least reagricultural surpluses adds nothing to the general welfare and even subtracts from general well-being by wasting resources that might otherwise have been used constructively.

We at The Equitable like to think we know something about agriculture. The Equitable has been financing farmers for half a century. During all this long period we have maintained our enthusiasm for farmers and for agriculture as a desirable area for safe long-term investment.

#### Holds Agriculture Is Not an Ailing Industry

Today The Equitable has over \$400 million invested in mortgages secured by farm real esstate and is actively seeking more. We reject emphatically the notion that agriculture is an ailing industry that requires continuing Federal subsidies for its survival. Quite the contrary is true. American agriculture is by far the most efficient and progressive in the world. What it needs is to be freed of shackles imposed by a benevolent government and to be permitted to operate to its full capacity in a free market.

A Russian agricultural worker produces only a subsistence diet for six other Russians. In con-Increased public spending is not trast, each American farm worker

> To better understand the farm problem it is necessary to examine its parts. We have about 4½ million farm families living on the land. About a million of them are on farms that are too small and too ill-equipped for successful competition under modern technology. Another million are also on small and inefficient farms but this group has the advantage of some outside employment on a part-time basis. The remaining 2½ million families represent America's solid,

> By changing our tax policy we and the rate of capital formation for growth. When we get around to tax reductions I would suggest giving the reduction of the 52% corporate rate high priority rating. This would strengthen incentives, and much of the taxsaving would go into capital formation largely through re-investment.

In a communistic society, the savings necessary for investment It is not recommended that the and growth are forced savingsforced both in a literal sense and also through arbitrary curtailment of the production of goods available for private consumption. In a free society, investment and through quotas or accumulate the large sums of savings; we need savings institu-

#### Importance of Debt Capital

lar obligations, has always been and always will be a vital financing tool and therefore an essen-It is my contention that any tial and important feature of our could have have been achieved without debt financing; that is

And I might add that the profits structure by as much as 12% or equity capital could never have eliminate road blocks and create

There is no future for our counterm investment made possible by individual thrift, sound fixed debt obligations, efficient savings institutions and confidence in the dollar. I am proud to say that the life insurance companies are excellent thrift institutions. They provide protection and security for American families. And they are growth-oriented in the sense that they help to encourage, accusavings into productive investment and thereby aid in America's growth. I am also proud of the fact that The Equitable is one of the industry's leaders both in size, in its efforts to encourage individual savings, and in its direction of these savings into productive enterprise throughout the land.

The success of our free enterprise system depends upon continuing growth while at the same time maintaining a reasonably stable price level. The mainte-There are many alternative nance of price stability is essential otherwise economic growth will not be sound and consequently will be both irregular and not long sustained.

Winfield Riefler, formerly Assistant to the Chairman of the Federal Reserve Board, recently has said:

"Inflation is the enemy of growth, particularly when there is public expectation that the purchasing power of money will continue to decline. Inflation impairs growth:

(1) Because it increases instability - high level of activity cannot be sustained for long when inflation is expected to prevail;

(2) Because it fosters the misallocation of capital and impairs the quality of the managerial and investment decisions on which growth is based;

(3) Because it distorts the saving - investment process and encourages overspeculation; and

(4) Because it undermines the country's position in international

#### Rejects Inflation to Spur Growth

We also reject the contention that inflation is necessary to stimulate growth. Investment is the key to growth - investment within a framework of sound fiscal and monetary policy. We certainly are in a sorry state if it is generally believed that it is safer to speculate than to save! We believe the Federal budget should be balanced over the business cycle; the independence of the Federal Reserve Board should not be impaired, interest rates should be permitted to fluctuate freely,

#### Summary

Now to summarize briefly. The points I have tried to establish are the following: (1) Economic growth is a key

issue of our time. (2) We witness a great debate as to whether free enterprise or

stimulate growth.

(3) The choice we make will determine whether our way of life Debt, the borrowing of money as we have known it will continue or whether it is to be replaced by one of more governmental direction and control.

As responsible citizens our policy should be to urge that Federal spending be directed into growthoriented channels and that nongrowth expenditures such as for agriculture, veterans, and other subsidies be abolished or substantially curtailed. Especially needed is a reorientation of Federal tax policy to encourage savings and investment. ## PUBLIC UTILITY SECURITIES BY OWEN ELY

#### Southwestern Public Service Company

Southwestern Public Service, with the sale of \$10 million bonds to areas of the Texas and Oklahoma Panhandle, Texas South Plains and New Mexico Pecos Valley. Amarillo and Lubbock, Texas, and Roswell, New Mexico, are the principal cities served. Industry in the area includes oil and gas producing (petroleum being an important factor), potash mining, food processing, chemicals, carbon black, etc. Originally the region was agricultural, and cattle, cotton, and grain are still important, with substantial irrigated acre-

The company's electric revenues are about 32% residential and rural, 22% commercial, 31% industrial and 15% wholesale. It originally inherited from predecessor companies some gas, water and ice properties but these have all been sold or liquidated with one exception, making the business virtually all-electric.

Southwestern Public Service is typical "growth utility." During the decade ending Aug. 31, 1959 revenues gained 183%, plant account 187%, kwh sales 214%, capability 204% and share earnings 137%. Revenues increased 11% in fiscal 1959 and kwh sales were up 13.3%. Rainfall in the area averaged about normal; but temperatures were slightly below normal which retarded irrigation and air conditioning sales, although they were well above the previous year. Construction activity continued at a record level, with building permits in the 16 princities served increasing about 46% compared with the previous 12 months period. Expansion programs were announced by the Air Force for each of its four installations served by the Company, and it was estimated that during fiscal 1960 some \$25, 000,000 would be spent on installations at these bases.

For the fiscal year just ended (Aug. 31, 1960) final data are not yet available but in the 12 months ended June 30 revenues gained over 10% and earnings for com-mon stock were up 17%. With mon stock were up 17%. With the heavy rainfall and the cool weather which prevailed during this period, kwh consumption in irrigated sections declined slightly; however, the drop in irrigation revenues was offset by increased residential, commercial, ings ratio is 24.3. and industrial sales. In June and July rainfall over the entire service area was the heaviest on rec- Legion Wall St. ord, averaging 11.2 inches in the 20 largest cities served. This Post Installs above - average rainfall assured good crops during the current Wall Street Post No. 1217 of the ing and irrigated areas.

The company's 12th steam generating station was placed in service last June, raising capability to 926,000 kw. Peak load was 771,-200 kw in 1959 and was expected to reach 831,000 kw in 1960. Construction expenditures approximated \$17 million in fiscal 1959 and about \$19 million in fiscal 1960; they are expected to average about \$20 million per annum over the next four or five years.

financing has been handled privately with institutions. Last November the company negotiated

revenues of over \$51 million, sup- two insurance companies and later plies electricity to a population arranged the sale of \$5 million estimated at 831,000 in adjacent preferred stock to four insurance companies, bank loans being re-tired with the new funds. In earlier years of the postwar period common stock was sold early in each calendar year but since 1954 less equity financing has been done. Common was last sold in 1957 and no further sale is anticipated until fiscal 1962 when stock may be issued on a 1-for-20 rights basis, it is forecast.

The company is optimistic regarding continued growth. Residential and commercial sales promotion programs produced good results in fiscal 1959, with sales of electric ranges, clothes dryers, water heaters, and dishwashers exceeding the previous year by more than 7%. Sales of commercial cooking equipment exceeded 1958 sales by 29%, with the company having the third best sales record for companies of comparable size in the United States. It is pushing the construction of Medallion Homes and has some 300 heat pumps in its area despite the competition with gas.

The company is earning about 6.2% on net property, the rate of return having improved from 5.3% in 1954. It has recently adopted liberalized depreciation but tax savings are normalized.

Despite the company's rapid growth share earnings had rather mediocre record of gains during the years 1949-54 but in the past five years earnings have shown an average gain of 7% Fiscal 1960 earnings are expected to approximate \$1.15 compared with 99¢ in fiscal 1959 (after adjustment for the 2-for-1 split earlier this year). Earnings for 1964 have been forecast at about \$1.55, indicating an annual rate of gain of nearly 8% per annum.

Dividend payout is expected to continue around 70%. The dividend rate was increased for the 15th time in 18 years last March and another increase in fiscal 1961 would seem warranted by the current rise in earnings. About 19% of common stock dividends in fiscal 1959 were non - taxable and about 11% is estimated for fiscal

At the recent price around 28, the 84¢ dividend rate affords a yield of 3%. Based on estimated earnings of \$1.15 the price-earn-

year both in the dry land farm- American Legion has installed ing and irrigated areas. Miss Polly Honl as Commander. The new Commander, a welfare worker and long active in the affairs of the Legion, is the first woman ever elected to head this 250 member Post.

In a ceremony known colloquially as "passing along the hat" Oliver J. Troster, Troster, Singer & Co., retiring commander presented to Miss Honl a new "Commander's" Legion cap. The presentation took place at Federal Much of the company's senior Hall Memorial Building at Wall and Nassau Streets.

probability of a price increase or steel strike threat.

Inroads of other materials, long talked about in metalworking, are showing significant results.

Warehouses are fighting for business and have not stepped up their own mill buying to any great

#### This Week's Steel Output Based On 52.7% of Jan. 1, 1960 Capacity

The American Iron and Steel Institute announced that the operating rate of the steel companies will average \*93.6% of steel capacity for the week, beginning Sept. 12, equivalent to 1,503,-000 tons of ingot and steel castings (based on average weekly production of 1947-49). These figures compared with the actual levels of \*87.2% and 1,401,000 tons in the week beginning Sept. 5.

Actual output for last week beginning Sept. 5, 1960 was equal to 49.2% of the utilization of the Jan. 1, 1960 annual capacity of 148,570,970 net tons. Estimated percentage for this week's forecast based on that capacity is

A month ago the operating rate (based on 1947-49 weekly production) was \*97% and production 1,558,000 tons. A year ago the actual weekly production was placed at 356,000 tons, or \*22.2%. At that time the industry was virtually closed down due to a strike of the steel union.

\*Index of production is based on average weekly production for 1947-49.

#### **Auto Industry Turned Out 6,011,688** 1960 Models-A 3-Year High Exceeding 5,568,046 in 1959 and 4,260,039 in 1958

Dodge posted its highest production count in 10 years in the 1960 model run, Ward's Automotive Reports said.

Ward's said the Dodge Dart comprised 87.8% or 306,603 units of the 1960 Dodge total of 349,120.

All told, Chrysler Corp. amassed 27.1% improvement over the 1959 run, recording the largest percentage gain among U. S. auto makers. Chrysler Corp. built 894,-149 cars in 1960 compared with 703,744 in 1959.

Over-all, the auto industry turned out 6,011,688 1960 models a three-year high — exceeding 5,568,046 in 1959 and 4,260,039 in 1958 model years, Ward's said.

The six compact cars accounted for 26.2% (1,574,468) of the 1960 total contrasted with 9.1% (505,748) in 1959 when only two compact makes were in the

Even with one less working day because of the Labor Day holiday, Ward's said car production in the week ended Sept. 10 climbed 7.3% over the previous week.

U. S. manufacturers built an estimated 55,119 cars compared with 51,390 last week and 24,364 in the same week last year.

Most plants worked four days. Only exceptions were the Ford Motor Co. compact car plants which operated Saturday, Sept. 10. Mercury's Wayne, Michigan plant wound up 1960 model production Sept. 6, Thunderbird concluded 1960 car operations at Wixom, Mich., on Sept. 9.

Meanwhile, inventories of new cars in dealers' hands and in transit dropped to 887,800 units on Sept. 1, Ward's said. The drop in new car stocks was 8.3% under the Aug. 20 level of 968,800 and 16.4% below the Aug. 1 stockpile of 1,062,000 units.

#### Freight Car Loadings for Sept. 3 Week Totaled 577,090 Cars or 5.3% Above Same 1959

Loading of revenue freight for the week ended Sept. 3, 1960, totaled 577,090 cars, the Associa-

corresponding week in 1959, which was affected by the nationwide Business Failures Down Slightly strike in the steel industry, and an increase of 13,365 cars or 2.4% 1958.

which were affected by strike-Railroads, were 17,680 cars or 3% below the preceding week.

loaded with one or more revenue highway trailers (piggyback) in toll of 209 in 1939. the week ended Aug. 27, 1960 (which were included in that week's over-all total). This was an increase of 2,131 cars or 24.7% above the corresponding week of the 1958 week.

Cumulative piggyback loadings for the first 34 weeks of 1960 totaled 359,288 for an increase of 93.429 cars or 35.1% above the corresponding period of 1959, and 191,410 cars or 114.0% above the corresponding period in 1958. There were 55 class I U. S. railroad systems originating this type traffic in the current week compared with 50 one year ago and 40 in the corresponding week of

#### Intercity Truck Tonnage Was 0.4% Ahead of Corresponding Week of 1959

Intercity truck tonnage in the week ended Sept. 3, was fractionally ahead-or 0.4%-of the volume in the corresponding week of 1959, the American Trucking Associations, Inc., announced. Truck tonnage was 6.8% more than that of the previous week of this year.

Several factors seemed to contribute to the improved tonnage reports for the week. Data from past years indicate that about half of the week-to-week gain can be attributed to seasonal factors. number of eastern terminals were moving freight not normally handled due to the strike on the Pennsylvania Railroad systemthe effect of this varied considerably among carriers.

These findings are based on the weekly survey of 34 metropolitan areas conducted by the ATA Reearch Department. The report rethan 400 truck terminals of comthroughout the country.

> Electric Output 8.4% Above 1959 Week

The amount of electric energy distributed by the electric light and power industry for the week ended Saturday, Sept. 10, was estimated at 14,216,000,000 kwh., according to the Edison Electric Institute. Output was 725,000,000 kwh. below that of the previous week's total of 14,941,000,000 kwh. but showed a gain of 1,107,000,000 kwh., or 8.4% above that of the comparable 1959 week.

#### Lumber Shipments for Week **Below Production**

Lumber shipments of 443 mills reporting to the National Lumber Trade Barometer were 1.8% below production during the week ended Sept. 3, 1960. In the same week, new orders of these mills were 7.5% below production. Unfilled orders of reporting mills amounted to 29% of gross stocks. For reporting softwood mills, unfilled orders were equivalent to 15 days' production at the current rate, and gross stocks were equivalent to 51 days' production.

For the year-to-date, shipments of reporting identical mills were ened up somewhat and prices 3.1% below production; new orders were 5.9% below production.

duction of reporting mills was picked up at the end of the week 0.5% below; shipments were 5.8% tion of American Railroads an- below; new orders were 8.7% be- from a week earlier. nounced. This was an increase of low. Compared with the corre-29,284 cars or 5.3% above the sponding week in 1959, production trading during the week and gress Street.

In contrast, small casualties with liabilities under \$5,000 edged up to 30 from 21. Thirtyfive of the concerns failing during the week had liabilities in excess of \$100,000, up from 33 in the preceding week.

#### Wholesale Food Price Index Returns to 1960 High

The Wholesale Food Price Index, compiled by Dun & Bradstreet, Inc., rose to \$5.98 on Sept. 6, the 1960 high, first hit on April 19, and then again on Aug. 2 and compared with \$5.90 a week earof 1.4%, and it was unchanged noticeably. from the corresponding date a year ago.

Higher in wholsesale cost this week were wheat, rye, oats, butter, cheese, coffee, tea, cocoa, eggs, potatoes, rice, steers, and hogs. On the down side were corn, barley, and lard.

Wholesale Food Price Index represents the sum total of the price per pound of 31 raw foodstuffs and meats in general use. It is chief function is to show the general trend of food prices at the wholesale level.

#### Wholesale Commodity Price Index Advances in Latest Week

There was a moderate rise this week in the general commodity price level, with higher prices on flects tonnage handled at more grains, lard, coffee, sugar, butter, hogs, and steers offsetting demon carriers of general freight clines on rubber and tin. The Daily Wholesale Commodity Price Index, compiled by Dun & Bradstreet, Inc., stood at 267.45 (1930-32=100) on Sept. 12, compared with 266.59 a week earlier and 277.90 on the corresponding date a year earlier.

> Good domestic and export buying helped wheat prices advance Rye prices rose appreciably as purchases moved up noticeably and supplies in some markets in the Corn Belt stimulated tradmoderately higher, arrivals of level achieved in the 1959 period corn in Chicago were limited. Although transactions in oats were sluggish, prices edged up fraction- Chicago Analysts ally in line with corn. ## Securities Now in Registration

NOTE—Because of the large number of issues awaiting processing by the SEC, it is becoming increasingly difficult to predict offering dates with a high degree of accuracy. The dates shown in the index and in the accompanying detailed items reflect the expectations of the underwriter but are not, in general, to be considered as firm offering dates.

Adler Built Industries, Inc.

Aug. 29, 1960 (letter of notification) 150,000 shares of common stock (par 10 cents). Price-\$2 per share. Proceeds — For acquisition and development of land and operating capital. Office—1201 W. 66th St., Hialeah, Fla. Underwriter - American Diversified Securities, Inc., Washington, D. C.

Admiral Homes, Inc. (9/26-30)
Aug. 15, 1960, filed \$400,000 of convertible subordinated debentures, due 1970. Price—100% of principal amount. Business—The manufacture and sale of pre-fabricated homes. Proceeds—To be added to the working capital of the company and its subsidiary. Office — 149 Water Street, West Newton, Pa. Underwriter — Arthurs, Lestrange & Co., Pittsburgh, Pa. (managing).

Adson Industries, Inc. July 20, 1960 (letter of notification) 150,000 shares of common stock (par 10 cents). Price—\$2 per share. Business—The company is a general contractor. Proceeds—For general corporate purposes. Office—116-55 Queens Boulevard, Forest Hills 75, N. Y. Underwriter—Bennett & Co., Newark, N. J.

 Ajax Magnethermic Corp. (9/19-23) Aug. 17, 1960 filed 150,000 shares of common stock (no par), of which 50,000 shares are to be offered for the account of the company, and 100,000 shares for the present holders thereof. Price—To be supplied by amendment. Business—The production of a complete line of induction heating equipment. Proceeds — For working capital and general corporate purposes. Office — 3990 Simon Road, Youngstown, Ohio. Underwriter—Hayden, Stone & Co. of New York City (managing).

Aldens Inc. (9/30)
Aug. 24, 1960 filed \$6,205,000 of convertible subordinated debentures, due Oct. 1, 1980, to be offered to holders of the outstanding common of record Sept. 30, 1960, on the basis of \$100 of such debentures for each 14 common shares then held with rights to expire on Oct. 17. Price—To be supplied by amendment. Proceeds—For general corporate purposes. Office—Chicago, Ill. Underwriter-Lehman Brothers, New York City.

Allied Bowling Centers, Inc.

Dec. 29 filed \$750,000 of sinking fund debentures and 300,000 shares of capital stock, to be offered in units of \$75 principal amount of debentures and 30 shares of stock. Price—\$108 per unit. #### Most useful in Mid America

Corporate officers and executives listed in Dun and Bradstreet's "Million Dollar Directory" say the Chicago Tribune is the Chicago newspaper most important and useful to them. Hundreds of thousands more midwesterners read the Tribune than read any other newspaper. Put the Tribune to work for you. Advertise your securities and services in the Tribune regularly. Your Tribune representative will be glad to give you details.

building include:

Selecting a prime site. Designing the best possible building for the site.

(3) Constructing the building with strict attention to cost. (4) Renting the space to high

credit-rated tenants on long-term

(5) Obtaining favorable mort-

gage financing.

The Uris organization has shown itself expert in all these phases of operations. It has had the ability to foresee the development of new areas and to choose prime sites for its buildings. Because of its experience, it has been able to build its structures at costs generally below its competitors' costs. Space in the Uris buildings has been rented primarily to AAA tenants under long-term leases running from 10 to 30 years. The result has been quality office buildings with high appraisal values and assured long-term income.

This assured long-term income, guaranteed in effect by leases to AAA tenants, is particularly important. Such assured income was not possible in real estate 30 years ago, when the longest leases on office space ran for only three to five years. Now, however, it is income puts such real estate investment in an entirely different category from investment, for view of the private investor, the future real estate activities will example, in an industrial company assets and achievements of Uris be for the benefit of the corpoups and downs of the business tant primarily as they affect the cycle, or in apartment houses basic value of the common stock. which have only short-term leases.

key steps in putting up such a demolition is still taking place, with first occupancy not scheduled until May 1962.

Recently, the company an-nounced plans for two new projects of tremendous importance. Rockefeller Center, Inc. has joined with Uris Buildings Corporation to form a new corporate partnership to erect a 42-story office building and a 38-story luxury hotel on two prime sites on the Avenue of the Americas, previously acquired by the Uris Buildings Corporation. These two buildings will be close to Rockefeller Center in a rapidly developing area which appears certain to be one of the major centers of New York real estate expansion over the next few years.

Permanent financing for both of the new structures has already been arranged. The Prudential Insurance Company of America will finance the office building, and the New York Life Insurance Company will finance the hotel. When completed in June 1962. the office building will have an appraised value estimated at \$54 million; and the hotel, which is to be completed in the Spring of 1963, will have an appraised value of about \$51 million.

This new association for Uris the hallmark of a highgrade office is an important forward step and building. The resulting stability of will have great significance for common equity. By way of further the future of the corporation.

## WASHINGTON AND YOU

BEHIND-THE-SCENES INTERPRETATIONS FROM THE NATION'S CAPITAL

WASHINGTON, D. C.-Labor is mobilizing its forces for the greatest participation in politics this fall of any time since it became a power on the American

Labor, with 13,000,000 persons belonging to unions, is going to have a strong voice not only in local and State politics, but in the outcome of the Presidency of the United States.

At this very moment labor has underway an intensive drive to get trade union members, their families and neighbors regis-tered and eligible to vote. The program is being financed by a 5-cent-a-member contribution by affiliated unions of the AFL-

Because of the all-out efforts being undertaken by organized labor, the chances of Senator John F. Kennedy being the next President of the United States are improved. Labor is backing the Massachusetts Senator.

As nearly everyone knows there is a small percentage of labor that is corrupt, but this number has hurt the organized movement with many people who do not belong to unions. When the McClellan Committee was conducting its searching into some of the corrupt and horrible practices of some crooks that had infiltrated into the union labor movement, 343 of the 1,525 witnesses before the McClellan Committee took the Fifth Amendment.

Senator John J. McClellan of Arkansas and his committee colleagues, and the committee's chief counsel, Robert F. Ken-nedy, brother of the Democratic presidential nominee, heard these 343 witnesses declare, "I refuse to answer on the grounds that a truthful answer might tend to incriminate me." One of the worst of the characters was Jimmy Hoffa, head of the Teamsters' Union, who was shown up as having all kinds of gangster connections.

"Not Typical"

But Hoffa is not typical of the Union movement. But the top drawer leaders of the AFL-CIO like President George Meany and Vice President Walter P. Reuther are all out to elect Senator Kennedy, members of Congress, state and local officials, particularly members of the various state legislatures, who are friendly to the aims and ideals of unions and union

Labor is greatly disappointed in the 86th Congress. On paper this Congress, which recently ended its special session, was supposed to be the friendliest of all toward labor. And it might have been except for the crookedness and corruption exposed by the McClellan Committee via the gangsters and racketeers that had infiltrated into a segment of the movement during the two years of intermittent hearings.

A survey by the Congressional Quarterly of action on 76 major AFL-CIO legislative proposals affecting unions and working people directly, showed that only seven of these proposals were passed by Congress and sent to President Eisenhower to sign. Two of these were vetoed.

The biggest blow of all since the late Senator Robert A. Taft of Ohio steered the Taft-Hartley law to passage in the 1947 Republican controlled Congress, came with the enactment of the Landrum-Griffin bill of 1959.

Labor On the March

The second biggest setback involving labor legislation was the failure of Congress, controlled by the Democrats almost two-to-one, to pass the Kennedy labor bill which would have raised the minimum hourly wage across the country to \$1.25, and would have extended coverage to an additional 5,000,000 workers, like department store clerks.

But labor is out to recoup some of its lost prestige and is willing and plans to spend huge sums of money in nearly every State and nationally. The biggest door bell ringing and knocking campaign this country has ever known is going to be done before the first heavy frost falls in many parts of the country.

Among other things Labor leaders are extremely anxious to get Congress to pass in the 8th Congress a Federal law that would nullify all state right-towork laws. Power breeds power is an old, but true saying as far as some of the labor bosses are concerned. These bosses are seeking special privilege and special legislation for immunity, according to some members of Congress who are not afraid to stand up and talk back in no uncertain terms to the Reuthers, Meanys, McDonalds, Hoffas, etc.

Laws in 19 States

Just as every man in the United States is privileged to worship as he pleases in our country, so should it be the privilege of every individual to join unions or not to belong to

There are 19 states that have right-to-work laws. In other words, in these states it is not compulsory that a person has to belong to a union as a condition to earning a living. These States are Alabama, Arizona, Arkansas, Florida, Georgia, Indiana, Iowa, Kansas, Mississippi, Nebraska, Nevada, North Carolina, North Dakota, South Carolina, South Dakota, Tennessee, Texas, Utah and Virginia. (Louisiana has a law applying only to agriculture workers).

Eight states have amended their constitutions to protect their laws from future legislatures, who might hurriedly pass repealer laws. By putting the right-to-work measure in the state constitution, the people would have a chance to vote on any repealer proposal that might come up in the future.

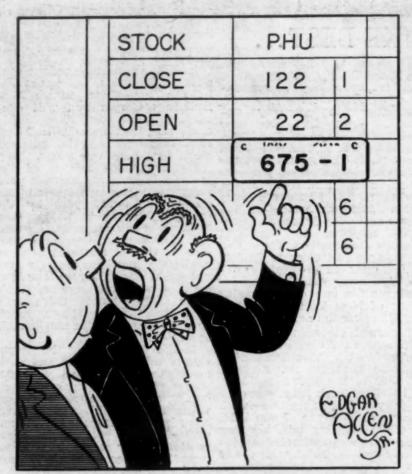

Senator Harry F. Byrd of Virginia, in the closing days of the dog-days sessions, rose to warn his Senate colleagues that the 1960 Democratic platform adopted at Los Angeles in July a plank that makes the direct and unequivocal pledge:

"We will repeal the authorization for right-to-work laws, limitations on the right to strike, to picket peacefully, and to tell the public the facts of a labor dispute, and other antilabor features of the Taft-Hartley Act and the 1959 (Landrum-Griffin) Act."

Byrd's Position

The fact that the labor chieftains got the Democratic party to make such a pledge to repeal the authorization to the states for right-to-work laws, shows the power that labor holds over

the Democratic party.
This would be bad for the country. Most fair-minded persons probably would concur in this statement. As Senator Byrd

"Who's the comedian who put this automobile license plate up here?"

said: fulfillment would be a massive victory for the big name labor bosses.

The distinguished Virginian, who has refused to endorse the Democratic ticket thus far, told his colleagues: "This is an appropriate time for me to say I shall oppose repeal of authori-zation for right-to-work laws with all my strength and ability.

"I regard the right to work as I do the right to life, liberty and the pursuit of happiness. It is the right, the responsibility, and the duty of the States to protect this fundamental freedom.

"The effect of this pledge would be national recognition of union membership as a condition of getting and holding a job, and to destroy State laws and constitutional provisions standing in the way."

Incidentally, there is nothing in the laws of these States with right-to-work laws that prohibits or impedes collective bargaining. Nor is there anything in those laws that forbids union affiliation. As the senior Senator from the Old Dominion State pointed out, the laws of these states protect the privilege of union membership for those who wish to join.

"The effect of the Democratic platform pledge taken in Los Angeles," said Senator Byrd. said Senator Byrd, "would be to destroy two great principles on which this nation is founded - individual liberty and States rights."

[This column is intended to reflect the "behind the scene" interpretation from the nation's Capital and may or may not coincide with the "Chronicle's" own views.]

## New World Bank **Directory Issued**

Reflecting a high level of business activity and the resulting heavy demand for funds, loans outstanding at U. S. banks jumped \$12.6 billion between June, 1959, and June, 1960, to a record \$143.2 billion. So reports the Final 1960 Edition of the Rand McNally International Bankers Directory (the 169th edition since 1872).

Total deposits, however, rose only \$3.6 billion during the 12-month period to \$252.4 billion. To obtain funds to make loans, therefore, the nation's banks reduced their holdings of U.S. Government securities by \$69 billion to \$61.8 billion, lowest level in the postwar era.

As a net result of these and other developments, total U. S. banking resources increased \$6.5 billion to a whopping \$284.1 billion. The bankers' Blue Book also reports that at midyear there were 14,058 banks and 10,488 bank Oct. 28-30, 1960 (Hot Springs, Va.) branches in the U. S. That was Southeastern Group of Invest-14 fewer than a year earlier, but ment Bankers Association meet-590 more branches. While a sub- ing. stantial number of new banks Nov. 3-4, 1960 (Miami, Fla.) this was more than offset by the continuing merger trend.
